**Industrial Robot Applications** E. Appleton, D.J. Williams, 2012-12-06 The hardest data for managers and engineers in charge of the design and implementation of robot systems to acquire is also the most valuable case studies detailing best current practice and the return on investment actually achieved It has been a major goal of the British Robot Association among other professional groups to organise meetings where such case studies are presented and discussed between members but the obvious restrictions of commercial confidentiality lead to considerable difficulty especially in relation to the best recent installations The authors of this book have been in the uniquely privileged position of lecturing in the Cambridge University Production Engineering Tripos a course specially organised in conjunction with a number of leading companies applying robots and automation Actual case studies from these companies form an important part of the course making this book that has emerged from it a uniquely important addition to our Open University Press series

**The 21st Century Industrial Robot: When Tools Become Collaborators** Maria Isabel Aldinhas Ferreira, Sarah R. Fletcher, 2021-10-25 This book aims to discuss the technical and ethical challenges posed by the present technological framework and to highlight the fundamental role played

by human centred design and human factors in the definition of robotic architectures for human robot collaboration The book gives an updated overview of the most recent robotic technology conceived and designed to collaborate with human beings in industrial working scenarios The technological development of robotics over the last years and the fast evolution of AI machine learning and IoT have paved the way for applications that extend far beyond the typical use of robots performing repetitive tasks in exclusive spaces In this new technological paradigm that is expected to drive the robotics market in the coming years robots and workers will coexist in the same workplace sharing not only this lived space but also the roles and functions inherent to a process of production merging the benefits of automated and manual performing However having robots cooperating in real time with workers responding in a physical psychological and social adequate way requires a human centred design that not only calls for high safety standards regulating the quality of human robot interaction but also demands the robot's fine grained perception and awareness of the dynamics of its surrounding environment namely the behaviours of their human peers their expected actions responses fostering the necessary collaborative efforts towards the accomplishment of the tasks to be executed
