This comprehensive book divided into seven sections showcases groundbreaking research findings that blend new experiences from the COVID 19 pandemic with long term research on online laboratories and virtual experimentation. Providing an adequate learning experience in the laboratory has long been a major challenge in science engineering and technology education. Recent years have further revealed the complexities of offering distance or remotely accessible educational settings particularly for laboratory based courses. In response many academic institutions have innovated by transitioning their laboratory classes into online laboratories or providing laboratory kits for at home use. This unprecedented situation has sparked numerous new developments approaches and activities revolutionizing the field. With contributions from leading researchers and practitioners across diverse disciplines this book delves into current trends addresses critical challenges and uncovers future opportunities for laboratory based education in the context of online learning. Whether readers are educators seeking innovative teaching strategies researchers exploring the latest advancements or academic leaders looking to enhance remote learning experiences this book provides valuable insights and practical solutions. It explores how online laboratories are transforming education and discovers the potential they hold for the future.

Robotic Fabrication in Architecture, Art and Design 2016 Dagmar Reinhardt, Rob Saunders, Jane Burry, 2016-02-03 The book presents the proceedings of Rob Arch 2016 the third international conference on robotic fabrication in architecture art and design. The work contains a wide range of contemporary topics from methodologies for incorporating dynamic material feedback into existing fabrication processes to novel interfaces for robotic programming to new processes for large scale automated construction. The latent argument behind this research is that the term file to factory must not be a reductive celebration of expediency but instead a perpetual challenge to increase the quality of feedback between design matter and making.

Advances in Mechanism Design II Jaroslav Beran, Martin Bílek, Petr Žabka, 2016-08-17 This book presents the most recent advances in the research of machines and mechanisms. It collects 54 reviewed papers presented at the XII International Conference on the Theory of Machines and mechanisms TMM 2016 held in Liberec Czech Republic September 6-8 2016. This volume offers an international selection of the most important new results and developments grouped in six different parts representing a well balanced overview and spanning the general theory of machines and mechanisms through analysis and synthesis of planar and spatial mechanisms linkages and cams robots and manipulators dynamics of machines and mechanisms rotor dynamics computational mechanics vibration and noise in machines optimization of mechanisms and machines mechanisms of textile machines mechatronics to the control and monitoring systems of machines. This conference is traditionally organised every four years under the auspices of the international organisation IFToMM and the Czech Society for Mechanics.
