Manuals Combined: U.S. Marine Corps Basic Reconnaissance Course (BRC) References, Over 5 300 total pages MARINE RECON Reconnaissance units are the commander's eyes and ears on the battlefield. They are task organized as a highly trained six man team capable of conducting specific missions behind enemy lines. Employed as part of the Marine Air Ground Task Force, reconnaissance teams provide timely information to the supported commander to shape and influence the battlefield. The varying types of missions a Reconnaissance team conduct depends on how deep in the battle space they are operating. Division Reconnaissance units support the close and distant battlespace while Force Reconnaissance units conduct deep reconnaissance in support of a landing force. Common missions include but are not limited to: Plan, coordinate and conduct amphibious ground reconnaissance and surveillance to observe, identify and report enemy activity and collect other information of military significance. Conduct specialized surveying to include underwater reconnaissance and or demolitions, beach permeability and topography, routes, bridges, structures, urban/rural areas, helicopter landing zones, LZ, parachute drop zones, DZ, aircraft forward operating sites and mechanized reconnaissance missions. When properly task organized with other forces, equipment or personnel assist in specialized engineer, radio and other special reconnaissance missions. Infiltrate mission areas by necessary means to include surface, subsurface and airborne operations. Conduct Initial Terminal Guidance (ITG) for helicopters, landing craft, parachutists, air delivery and re supply. Designate and engage selected targets with organic weapons and force fires to support battlespace shaping. This includes designation and terminal guidance of precision guided munitions. Conduct post strike reconnaissance to determine and report battle damage assessment on a specified target or area. Conduct

Interactive Sketch-based Interfaces and Modelling for Design Alexandra Bonnici,Kenneth P. Camilleri,2023-05-31 Sketching is a natural and intuitive communication tool used for expressing concepts and ideas that are difficult to communicate through text or speech alone In design applications drawings are used at various stages of the design process from the early concept drawings scribbled on a piece of paper to immersive interactions in which users manipulate and adjust the 3D form of an object in virtual or augmented reality environments This variety in drawing activities brings about the need for different interpretation strategies that support not only the sketching activity itself but also allow sketch based interactions such as sketch based queries to take place In this book we explore the different drawing approaches used in design and the algorithms required for processing and interpreting the different sketches and drawings in design The book is divided into two parts The first part focuses on sketching in the 2D domain This includes the digitization of offline and paperbased sketches techniques for online sketch recognition observations of user drawing habits algorithms for inferring depth from 2D drawings as well as non photorealistic rendering techniques that are then applied to sketch based queries The second part of the book focuses on 3D sketching in virtual or augmented reality spaces Here we present the processing and rendering of the 3D strokes the different interaction devices available for 3D sketching and look at different applications where immersive 3D sketching has been applied with success *The Routledge Handbook of Corpus Linguistics* Anne O'Keeffe,Michael J. McCarthy,2022-02-08 The Routledge Handbook of Corpus Linguistics 2e provides an updated overview of a dynamic and rapidly growing area with a widely applied methodology Over a decade on from the first edition of the Handbook this collection of 47 chapters from experts in key areas offers a comprehensive introduction to both the development and use of corpora as well as their ever evolving applications to other areas such as digital humanities sociolinguistics stylistics translation studies materials design language teaching and teacher development media discourse discourse analysis forensic linguistics second language acquisition and testing The new edition updates all

core chapters and includes new chapters on corpus linguistics and statistics digital humanities translation phonetics and phonology second language acquisition social media and theoretical perspectives Chapters provide annotated further reading lists and step by step guides as well as detailed overviews across a wide range of themes The Handbook also includes a wealth of case studies that draw on some of the many new corpora and corpus tools that have emerged in the last decade Organised across four themes moving from the basic start up topics such as corpus building and design to analysis application and reflection this second edition remains a crucial point of reference for advanced undergraduates postgraduates and scholars in applied linguistics

The Death of Drawing David Scheer, 2014-06-05 The Death of Drawing explores the causes and effects of the epochal shift from drawing to computation as the chief design and communication medium in architecture Drawing both framed the thinking of architects and organized the design and construction process to place architects at its center Its displacement by building information modeling BIM and computational design recasts both the terms in which architects think and their role in building production Author David Ross Scheer explains that whereas drawing allowed architects to represent ideas in form BIM and computational design simulate experience making building behavior or performance the primary object of design The author explores many ways in which this displacement is affecting architecture the dominance of performance criteria in the evaluation of design decisions the blurring of the separation of design and construction the undermining of architects authority over their projects by automated information sharing the elimination of the human body as the common foundation of design and experience the transformation of the meaning of geometry when it is performed by computers the changing nature of design when it requires computation or is done by a digitally enabled collaboration Throughout the book Scheer examines both the theoretical bases and the practical consequences of these changes The Death of Drawing is a clear eyed account of the reasons for and consequences of the displacement of drawing by computational media in architecture Its aim is to give architects the ability to assess the impact of digital media on their own work and to see both the challenges and opportunities of this historic moment in the history of their discipline

Discursive Approaches to Politics in Malaysia Kumaran Rajandran, Charity Lee, 2023-01-01 This open access book examines Malaysian politics using a linguistic perspective It explores how language serves to de legitimise governance and its subsequent policies and activities in Malaysia Grounded in discourse studies this edited volume presents research on the discourses produced by and on Barisan Nasional Pakatan Harapan and Perikatan Nasional from 2008 to 2020 studying how political actors de legitimise their governance through discursive means The thirteen original chapters select spoken print and digital texts in English Malay Mandarin and Tamil and deploy varied theoretical and methodological approaches Their linguistic analysis unearths the language features and strategies that facilitate de legitimization It shows how political actors shape the discursive representation and evaluation of multiple concerns in Malaysia Consequently Discursive Approaches to Politics in Malaysia Legitimising Governance improves

our understanding of contemporary Malaysian political discourse It is of interest to graduates and researchers in the field of discourse studies seeking to understand the discursive contours of politics in this developing Asian country
