

DSM-5-TRTM Overview

Essential descriptions of DSM-5-TR mental disorders, including symptoms, manifestations, and classifications

NOTE: This guide includes the majority of mental disorders in the DSM-5-TR. "Other specified" and "unspecified" disorders, which do not meet the full criteria for other disorders within a category, and disorders due to another medical condition are omitted.

Almost all conditions listed here include the caveat that the condition (C) is not due to the effects of a substance (except in the case of substance-related disorders) or to another medical condition, (C) is not better explained by the diagnosis of another mental disorder, and (C) causes significant distress and impairment in social, academic, vocational, or other important areas of functioning.

NEURODEVELOPMENTAL DISORDERS

Neurodevelopmental disorders have their onset during the developmental period.

Intellectual Developmental Disorder (Intellectual Disability)

Deficits in intellectual and adaptive functioning, with intellectual deficits manifested as problems with reasoning, problem solving, abstract thinking, and other intellectual functions as confirmed by clinical assessment and standardized tests of intelligence. Adaptive functioning deficits manifest as failure to demonstrate expected levels of independence and social responsibility. Deficits last functioning in home, school, work, and community environments.

Communication Disorders

This category includes Language Disorder, Speech Sound Disorder, Childhood-Onset Fluency Disorder (Stuttering), and Social (Pragmatic) Communication Disorder and applies, broadly, to persistent difficulties in hearing and using language in its various forms (written, spoken, sign) due to deficits in comprehension or production, with onset during early development. Deficits (i.e., performance significantly below accepted age norms) are manifested as reduced vocabulary; inability to express oneself due to limited sentence structure, and impaired discourse abilities. Difficulties are not attributable to an underlying medical condition.

Autism Spectrum Disorder

Persistent problems in social interaction and communication across a wide range of contexts, including reduced ability to share emotions and interests and peer ability to use verbal and nonverbal communication and reciprocal social patterns. Also indicated by repetitive behaviors and patterns, interest in restricted areas of interest, and fixation on restricted interests. Heightened sensitivity or lack thereof to environmental sensory stimuli.

Problems in learning and demonstrating academic skills in reading, written expression, and/or mathematics. Manifested by poor reading accuracy, fluency, and/or comprehension; difficulty with spelling, grammar, punctuation, and/or organization and clarity of writing; and/or difficulty in learning mathematical concepts and facts and applying mathematical reasoning skills.
