Security, Privacy and Trust in the IoT Environment Zaigham Mahmood, 2019-05-30

The Internet of Things IoT is a network of devices and smart things that provides a pervasive environment in which people can interact with both the cyber and physical worlds As the number and variety of connected objects continue to grow and the devices themselves become smarter users expectations in terms of adaptive and self governing digital environments are also on the rise Although this connectivity and the resultant smarter living is highly attractive to general public and profitable for the industry there are also inherent concerns The most challenging of these refer to the privacy and security of data user trust of the digital systems and relevant authentication mechanisms These aspects call for novel network architectures and middleware platforms based on new communication technologies as well as the adoption of novel context aware management approaches and more efficient tools and devices In this context this book explores central issues of privacy security and trust with regard to the IoT environments as well as technical solutions to help address them The main topics covered include Basic concepts principles and related technologies Security privacy of data and trust issues Mechanisms for security privacy trust and authentication Success indicators performance metrics and future directions This reference text is aimed at supporting a number of potential audiences including Network Specialists Hardware Engineers and Security Experts Students Researchers Academics and Practitioners

Software Engineering in the Era of Cloud Computing Muthu

Ramachandran,Zaigham Mahmood,2020-01-01 This book focuses on the development and implementation of cloud based complex software that allows parallelism fast processing and real time connectivity Software engineering SE is the design development testing and implementation of software applications and this discipline is as well developed as the practice is well established whereas the Cloud Software Engineering CSE is the design development testing and continuous delivery of service oriented software systems and applications Software as a Service Paradigm However with the emergence of the highly attractive cloud computing CC paradigm the tools and techniques for SE are changing CC provides the latest software development environments and the necessary platforms relatively easily and inexpensively It also allows the provision of software applications equally easily and on a pay as you go basis Business requirements for the use of software are also changing and there is a need for applications in big data analytics parallel computing AI natural language processing and biometrics etc These require huge amounts of computing power and sophisticated data management mechanisms as well as device connectivity for Internet of Things IoT environments In terms of hardware software communication and storage CC is highly attractive for developing complex software that is rapidly becoming essential for all sectors of life including commerce health education and transportation The book fills a gap in the SE literature by providing scientific contributions from researchers and practitioners focusing on frameworks methodologies applications benefits and inherent challenges barriers to engineering software using the CC paradigm The Internet of Things in the Industrial Sector Zaigham

Mahmood,2019-08-02 This book has a focus on the development and deployment of the Industrial Internet of Things IIoT paradigm discussing frameworks methodologies benefits and limitations as well as providing case studies of employing the IoT vision in the industrial domain IIoT is becoming an attractive business reality for many organisations such as manufacturing logistics oil and gas energy and other utilities mining aviation and many more The opportunities for this paradigm are huge and according to one report the IIoT market is predicted to reach 125 billion by 2021 The driving philosophy behind the IIoT is that smart machines are better than humans at accurately capturing analysing and communicating real time data The underlying technologies include distributed computing machine learning artificial intelligence and machine to machine communication with a typical IIoT system consisting of intelligent systems applications controllers sensors and security mechanisms data communication infrastructure cloud computing edge computing etc data analytics to support business intelligence and corporate decision making and most importantly the human element The promised benefits of the IIoT include enhanced safety better reliability smart metering inventory management equipment tracking and facilities management There are however numerous issues that are also becoming the focus of active research such as concerns regarding service availability data security and device communication Lack of ubiquitous interoperability between heterogeneous devices is also a major concern This book intends to fill a gap in the IIoT literature by providing the scientific contributions and latest developments from researchers and practitioners of international repute focusing on

frameworks methodologies benefits and inherent issues barriers to connected environments especially in industrial settings The intended audience includes network specialists hardware engineers and security experts who wish to adopt newer approaches for device connectivity IoT security and sensor based devices design University level students researchers and practitioners will also find the latest innovation in technology and newer approaches relevant to the IIoT from a distributed computing perspective
