During the last two decades there have been many reports about the success and failure of investments in ICT and information systems. Failures in particular have drawn a lot of attention. The outcome of the implementation of information and communication systems has often been disastrous. Recent research does not show that results have improved. This raises the question why so many ICT projects perform so badly. Information Organization and Information Systems Design: An Integrated Approach to Information Problems aims at discussing measures to improve the results of information systems. Bart Prakken identifies various factors that explain the shortfall of information systems. Subsequently he provides a profound discussion of the measures that can be taken to remove the causes of failure. When organizations are confronted with information problems they will almost automatically look for ICT solutions. However, Prakken argues that more fundamental and often cheaper solutions are in many cases available. When looking for solutions to information problems, the interrelationship between organization, information, and the people within the organization should explicitly be taken into account. The measures that the author proposes are based on organizational redesign, particularly using the sociotechnical approach. In cases where ICT solutions do have to be introduced, Prakken discusses a number of precautionary measures that will help their implementation. The book aims to contribute to the scientific debate on how to solve information problems and can be used in graduate and postgraduate courses. It is also helpful to managers.

Management In Health Care Systems (1984) J. H. U. Brown, 2017-11-22. Health care system has suffered from poor management from the beginning yet the traditional management text books offer little help by focusing on management for sales and profits which are totally foreign to the medical environment. The books usually deal with the business problems whereas the medical care system is a bureaucracy and should be understood as such. In this book the author refocuses traditional management information in the form of material which will be of use to the medical community. There is no discussion of sales, markets, profit and loss etc in the traditional sense. Each discussion has been based on medical and hospital procedure and the activity of the health care system. The book looks closely on topics such as standards, controls, and feedback because these are subjects which are not often well understood and which often make the difference between success and failure in management. The author has also

treated the subject of planning in greater detail because this is such a vital element of the medical system Because the same references often apply to many areas of discussion the author has deliberately cited the reference once and provide an extensive bibliography of general references Each reference is selected to deal with the topic in general rather than with individual ideas

As part of a larger study of the strategic arms competition which developed after World War II between the U S and the U S S R, this study of the two countries' strategies for air and ballistic missile defense addresses two broad subjects: 1. How did each country approach the problem of defense against the threat from the air? 2. Why did each country accent particular elements of an air defense strategy at various periods between 1945 and 1972?
