HAMMER TYPE

Multi-Impact Spring Hammer

(See page 14)

Jaques Hammer mills are built especially to reduce limestone and other relatively non-plastic materials to "fines" (20-100 mesh). Based on the proven, spring-type hammer, featuring all their weight concentrated at the point of impact and rotating at high speed, these mills reduce the material with unusual efficiency. Low maintenance, prompt removal of broken plates in the hammer and free passage of the product from bottom of pulverizing to screen are the material features that make the hammer mills, thereby increasing wear on the hammers and grates.

These compact, sturdy mills, with hammer-bearing housings are made in six sizes ranging 12" to 36" diameter. The output capacity in tons per hour, high percentage of fine stock, etc. are provided in discharge gate for operation are set to suit requirements. They can be installed either open top or enclosed for trouble-free, continuous grinding without any extra expense.

GYRATORY TYPES

Gyrax — Size 14"

Light Weight but Sturdy
High Efficiency
Low Feed Rate

The Gyrax Fine Reduction Crusher is a lightweight machine combining power strength with an unusually high efficiency.

The Traulsen design of ball feed and spread screens fitted to these crushers eliminates feeding and grinding between crushing faces.

The construction is uncomplicated and easy to handle after bearings, and the eccentric shaft shaft and gears are all mounted in oil-air bath of circulating pump cooled for a large oil reservoir.

These crushers are suitable for working at extremely fine settings, and by reason of their light weight, low feed rate and low power consumption are particularly adaptable for use with small portable crushing plants and specialized for crushing applications in process industries.

Can be equipped with either bar or conical driving pulley.

Traulsen 'TY' and 'TZ'

(See page 14) 12" to 36" dia.

Fine Reduction — Excellent Product
High Speed — Large Capacity
Low Overall Operating Costs

These crushers are manufactured under license to the Traulsen Eng. & Mfg. Company of Jefferson, Mo., U.S.A. Type 'TY' and 'TZ' crushers are compact machines combining both fine screen and ball screen feeds and grinders. They are designed to handle large quantities of material, giving efficiency and very low maintenance in operation. The three 12" to 36" dia. heavy, springing ball feed and spread screens at different levels discharge without clogging and a self-cleaning mechanism constantly feed into roller bearings.

The same capacity and efficiency of Traulsen Gyrotory Crushers is due to the advanced design of the ball feed and spread screens.

Crushing is assisted by increasing the capacity of each crushing feeding zone — power requirements are reduced, even at fine settings for producing a grade just below the screen, instead of a coarse crushing face. The reduced clearance between screen material and crushing surface greatly increases the life of these parts. Ideal for secondary and tertiary crushing operations.

ROLL TYPE

Double Crushing Roll

(See page 14) 12" to 36" dia.

Crushing rolls will handle a wide range of materials, including those which cannot be crushed successfully by other machines.

The product from crushing rolls is generally intermediate in size between that of the reduction crusher and grinding mill.

The spacing capacity of rolls being broken, they should be formed of steel structure to gradually rise the larger material in the feed.

These rolls will take five times of crushing rolls for comminuting capacity of same capacity. They are usually set for an even feed, giving maximum wear on rolls and shaft. Roll shafts can be set in concrete, steel, chrome steel or drilled iron. They may be either square, round, conical or wheel, according to the service required.

Roller buffers or springs are fitted to provide the necessary crushing pressure and prevent the movable roll from becoming unduly strained under the machine.

Feeding Equipment

PLATE APRON TYPE

(See page 14) 12" to 36" dia.

These feeders are manufactured with frames in the Jaques Eng. & Mfg. Company of Jefferson, Mo., U.S.A. and are designed for heavy, portable construction with the input of large volume of material directly into the feeder. They are most satisfactory when used with an impact crusher, a solid surface and power, or for an auxiliary, any Jaques material. The pans are linked together with heavy pins and are supported by large steel rollers running in slots. Heavy duty, ball-bearing bearings, mounted in right form of heavy steel frame, support the pans.

Other common good construction with auxiliary impact pan, or suitable sized hydraulic control units can be for the making.
