Nature-Based Solutions for agricultural water management and food security Food and Agriculture Organization of the United Nations,2019-03-14 Accessibility to clean and sufficient water resources for agriculture is key in feeding the steadily increasing world population in a sustainable manner Nature Based Solutions NBS offer a promising contribution to enhance availability and quality of water for productive purposes and human consumption while simultaneously striving to preserve the integrity and intrinsic value of the ecosystems Implementing successful NBS for water management however is not an easy task since many ecosystems are already severely degraded and exploited beyond their regenerative capacity Furthermore ecosystems are large and complex and the many stakeholders involved may have conflicting interests Hence implementation of NBS requires a structured and comprehensive approach that starts with the valuation of the services provided by the ecosystem The whole set of use and non use values in monetary terms provides a factual basis to guide the implementation of NBS which is ideally based on transdisciplinary principles i e complemented with scientific and case specific knowledge of the ecosystem in an adaptive decision making process that involves the relevant stakeholders This discussion paper evaluated twenty one NBS case studies using a non representative sample to learn from successful and failed experiences and to identify possible causalities among factors that characterize

the implementation of NBS The case studies give a minor role to valuation of ecosystem services an area for which the literature is still developing guidance Less successful water management projects tend to suffer from inadequate factual and scientific basis and uncoordinated or insufficient stakeholder involvement and lack of long term planning Successful case studies point to satisfactory understanding of the functioning of ecosystems and importance of multi stakeholder platforms well identified funding schemes realistic monitoring and evaluation systems and endurance of its promoters A Real-Time Approach to Process Control William Y. Svrcek, Donald P. Mahoney, Brent R. Young, 2013-03-15 A Real Time Approach to Process Control provides the reader with both a theoretical and practical introduction to this increasingly important approach Assuming no prior knowledge of the subject this text introduces all of the applied fundamentals of process control from instrumentation to process dynamics PID loops and tuning to distillation multi loop and plant wide control In addition readers come away with a working knowledge of the three most popular dynamic simulation packages The text carefully balances theory and practice by offering readings and lecture materials along with hands on workshops that provide a virtual process on which to experiment and from which to learn modern real time control strategy development As well as a general updating of the book specific changes include A new section on boiler control in the chapter on common control loops A major rewrite of the chapters on distillation column control and multiple single loop control schemes The addition of new figures throughout the text Workshop instructions will be altered to suit the latest versions of HYSYS ASPEN and DYNSIM simulation software A new solutions manual for the workshop problems **Comprehensive Nuclear Materials**
