*Knowledge and Music Education* Graham J. McPhail,2022-08-05 *Knowledge and Music Education* A Social Realist Account explores current challenges for music education in relation to wider philosophical and political debates and seeks to find a way forward for the field by rethinking the nature and value of epistemic knowledge in the wake of postmodern critiques Focusing on secondary school music and considering changes in approaches to teaching over time this book seeks

to understand the forces at play that enhance or undermine music's contribution to a socially just curriculum for all. The author argues that the unique nature of disciplinary derived knowledge provides students with essential cognitive development and must be integrated with the turn to more inclusive student-centred and culturally responsive teaching. Connecting theoretical issues with concrete curriculum design, the book considers how we can give music students the benefits of specialised subject knowledge without returning to a traditional past.

**Mendelian Randomization: An Approach for Precision Medicine and Public Health** Triinu Peters, Xiaoqing Pan, Yi-Ju Li, Jiayue-Clara Jiang, 2025-04-24

Epidemiological studies have established various observational associations between modifiable human behaviors and disease risk. However, observational studies are prone to unmeasured confounding bias and cannot establish causal associations which are important to investigate disease treatment and drug development. In 1991, Gray and Wheatley proposed the term Mendelian Randomization, a method that was applied to obtain unbiased estimations of the impact of cancer treatment within a family-based design. The term has since been applied to describe statistical genomic studies that used genetic instruments as proxy for modifiable risk factors or behaviors to infer causal association with diseases. The principle of Mendelian Randomization relies on Mendel's laws of inheritance and random segregation. It is less prone to unmeasured confounding bias and reverse causation compared to observational studies and can be applied to address questions of causality without any typical bias that impact the validity of traditional epidemiological methods. Studies based on Mendelian Randomization have become more conventional with the enhancement of genome-wide association studies (GWAS) and genome sequencing technologies. These methods have the potential to reveal the aetiological importance of environmental causal factors in common chronic diseases with minimal influence of confounding, reverse causation, and various other sources of bias.
