McCloskey, 1998-05-15 A classic in its field this pathbreaking book humanized the scientific rhetoric of economics to reveal its literary soul Economics needs to admit that it like other sciences works with metaphors and stories Its most mathematical and statistical moments are properly dominated by comparison and narration that is to say human persuasion The book was McCloskey s opening move in the development of a humanomics and unification of the sciences and the humanities on the

field of ordinary business life **The Boston Renaissance** Barry Bluestone, Mary Huff Stevenson, 2000-06-29 This volume documents metropolitan Boston's metamorphosis from a casualty of manufacturing decline in the 1970s to a paragon of the high tech and service industries in the 1990s The city's rebound has been part of a wider regional renaissance as new commercial centers have sprung up outside the city limits A stream of immigrants have flowed into the area redrawing the map of ethnic relations in the city While Boston's vaunted mind based economy rewards the highly educated many unskilled workers have also found opportunities servicing the city's growing health and education industries Boston's renaissance remains uneven and the authors identify a variety of handicaps low education unstable employment single parenthood that still hold minorities back Nonetheless this book presents Boston as a hopeful example of how America's older cities can reinvent themselves in the wake of suburbanization and deindustrialization A Volume in the Multi City Study of Urban Inequality **Success in Agricultural Transformation** Isabelle Tsakok, 2011-08-01 To lift and keep millions out of poverty requires that smallholder agriculture be productive and profitable in the developing world Do we know how to make this happen Researchers and practitioners still debate how best to do so The prevailing methodology which claims causality from measures of statistical significance is inductive and yields contradictory results In this book instead of correlations Isabelle Tsakok looks for patterns common to cases of successful agricultural transformation and then tests them against other cases She proposes a hypothesis that five sets of conditions are necessary to achieve success She concludes that government investment in and delivery of public goods and services sustained over decades is essential to maintaining these conditions and thus successfully transform poverty ridden agricultures No amount of foreign aid can substitute for such sustained government commitment The single most important threat to such government commitment is subservience to the rich and powerful minority *A Primer in Econometric Theory* John Stachurski, 2016-07-29 A concise treatment of modern econometrics and statistics including underlying ideas from linear algebra probability theory and computer programming This book offers a cogent and concise treatment of econometric theory and methods along with the underlying ideas from statistics probability theory and linear algebra It emphasizes foundations and general principles but also features many solved exercises worked examples and code listings After mastering the material presented readers will be ready to take on more advanced work in different areas of quantitative economics and to understand papers from the econometrics literature The book can be used in graduate level courses on foundational aspects of econometrics or on fundamental statistical principles It will also be a valuable reference for independent study One distinctive aspect of the text is its integration of traditional topics from statistics and econometrics with modern ideas from data science and machine learning readers will encounter ideas that are driving the current development of statistics and increasingly filtering into econometric methodology The text treats programming not only as a way to work with data but also as a technique for building intuition via simulation Many proofs are followed by a simulation that shows the theory in action As a primer the book offers readers

an entry point into the field allowing them to see econometrics as a whole rather than as a profusion of apparently unrelated ideas
