Lisp Lore A Guide To Programming The Lisp Machine:

Lisp Lore: A Guide to Programming the Lisp Machine H. Bromley, 2013-03-14 This book had its genesis in the following piece of computer mail From allegra joan b Tue Dec 18 09 15 54 1984 To sola hjb Subject lispm Hank I ve been talking with Mark Plotnik and Bill Gale about asking you to conduct a basic course on using the lisp machine Mark for instance would really like to cover basics like the flavor system etc so he could start doing his own programming without a lot of trial and error and Bill and I would be interested in this too I m quite sure that Mark Jones Bruce Eric and Van would also be really interested Would you like to do it Bill has let me know that if you d care to set something up he s free to meet with us anytime this week or next although I ll only be here on Wed next week so we can come up with a plan What do you think Joan

Education/Technology/Power Hank Bromley, Michael W. Apple, 1998-01-01 With a focus on educational computing this book examines how technological practices align with or subvert existing forms of dominance Examines the important question Is the enormous financial investment school districts are making in computing technology a good idea

Proceedings of the 2002 ACM SIGPLAN International Conference on Functional Programming (ICFP '02), 2002 Applied Artificial Intelligence Reporter, 1987 **Coordination of Distributed Problem Solvers** Edmund H. Durfee, 2012-12-06 As artificial intelligence AI is applied to more complex problems and a wider set of applications the ability to take advantage of the computational power of distributed and parallel hardware architectures and to match these architectures with the inherent distributed aspects of applications spatial functional or temporal has become an important research issue Out of these research concerns an AI subdiscipline called distributed problem solving has emerged Distributed problem solving systems are broadly defined as loosely coupled distributed networks of semi autonomous problem solving agents that perform sophisticated problem solving and cooperatively interact to solve problems Nodes operate asynchronously and in parallel with limited internode communication Limited internode communication stems from either inherent bandwidth limitations of the communication medium or from the high computational cost of packaging and assimilating information to be sent and received among agents Structuring network problem solving to deal with consequences of limited communication the lack of a global view and the possibility that the individual agents may not have all the information necessary to accurately and completely solve their subproblems is one of the major focuses of distributed problem solving research It is this focus that also is one of the important distinguishing characteristics of distributed problem solving research that sets it apart from previous research in AI A Guided Tour of Artificial Intelligence Research Pierre Marquis, Odile Papini, Henri Prade, 2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of knowledge

representation and the formalization of reasoning and learning Volume 1 Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI This third volume is dedicated to the interfaces of AI with various fields with which strong links exist either at the methodological or at the applicative levels The foreword of this volume reminds us that AI was born for a large part from cybernetics Chapters are devoted to disciplines that are historically sisters of AI natural language processing pattern recognition and computer vision and robotics Also close and complementary to AI due to their direct links with information are databases the semantic web information retrieval and human computer interaction All these disciplines are privileged places for applications of AI methods This is also the case for bioinformatics biological modeling and computational neurosciences The developments of AI have also led to a dialogue with theoretical computer science in particular regarding computability and complexity Besides AI research and findings have renewed philosophical and epistemological questions while their cognitive validity raises questions to psychology The volume also discusses some of the interactions between science and artistic creation in literature and in music Lastly an epilogue concludes the three volumes of this Guided Tour of AI Research by providing an overview of what has been achieved by AI emphasizing AI as a science and not just as an innovative technology and trying to dispel some misunderstandings

The Shell Process Control Workshop David M. Prett, Manfred Morari, 2013-10-22 Shell Process Control Workshop covers the proceedings of a workshop of the same name held in Houston Texas on December 15 1986 The said workshop seeks to improve the communication process between academic researchers industrial researchers and the engineering community in the field of process control and in turn improve understanding of the nature of the control problems The book covers topics such as design methodology based on the fundamental control expert systems in process control and optimization artificial intelligence and adaptive control for processes Also covered are topics such the approach of systems engineering to process modeling modeling and control of dispersed phase systems and advances in the use of the internal model control The text is recommended for researchers and practitioners in the field of engineers who would like to know more about process control and modeling
