Remote Sensing and Image Interpretation

Thomas M. Lillesand, Ralph W. Kiefer, 1979. This straightforward introduction to remote sensing provides comprehensive up-to-date coverage of the subject for students irrespective of their disciplines of study or the academic department in which remote sensing is taught. All the classical elements of aerial photographic interpretation and photogrammetry are described but equal emphasis is placed on non-photographic sensing systems and the analysis of data from these systems using digital image processing procedures. Includes coverage of image restoration, enhancement, classification, and data merging and new sensor systems such as the Large Format Camera, solid state linear arrays, the Shuttle Imaging radar systems, the Landsat Thematic Mapper, the SPOT satellite system, and the NOAA Advanced Very High Resolution Radiometer. Also covers imaging spectrometry and lidar systems. Contains extensive illustrations. REMOTE SENSING AND IMAGE INTERPRETATION, 6TH EDITION Lillesand, Kiefer, Chipman, 2011-08-01. Degradation Assessment and Management R. S. Dwivedi, 2018-10-17 The constant growth of the world's population and the decline of the availability of land and soil resources are global concerns for food security. Other concerns are the decrease in productivity and delivery of essential ecosystem services because of the decline of soil quality and health by a range of degradation processes. Key soil properties like soil bulk density, organic carbon concentration, plant available water capacity, infiltration rate, air porosity, at field moisture capacity and nutrient reserves are crucial properties for soil functionality which refers to the capacity of soil to perform numerous functions. These functions are difficult to measure directly and are estimated through indices of soil quality and soil health. Soil degradation, its extent and severity can also be estimated by assessing indices of soil quality and health. Geospatial Technology for Land Degradation Assessment and Management uses satellite imagery and remote sensing technologies to measure landscape parameters and terrain attributes. Remote sensing and geospatial technologies are important tools in assessing the extent and the severity of land and soil degradation, their temporal changes and geospatial distribution in a timely and cost-effective manner. The knowledge presented in the book by Dr. R. S. Dwivedi shows how remote sensing data can be utilized for inventorying, assessing and monitoring affected ecosystems and how this information can be integrated in the models of different local settings. Through many land degradation studies, land managers, researchers and policymakers will find practical applications of geospatial technologies and future challenges. The information presented is also relevant to advancing the Sustainable Development Goals of the United Nations towards global food security.

Research **Technical Manual for Groundwater Exploration in Arid and Semiarid Regions Using Landsat Visual and Digital Analyses** Judith Ann Monte, Daniel I. Cooper, 1982 **Satellite Remote Sensing for Conservation Action** Allison K. Leidner, Graeme M. Buchanan, 2018-08-16

Satellite remote sensing presents an amazing opportunity to inform biodiversity conservation by inexpensively gathering repeated monitoring information for vast areas of the Earth. However, these observations first need processing and interpretation if they are to inform conservation action. Through a series of case studies, this book presents detailed examples of the application of satellite remote sensing covering both aquatic and terrestrial ecosystems to conservation. The authors describe how collaboration between the remote sensing and conservation communities makes satellite data functional for operational conservation and provide concrete examples of the lessons learned in addition to the scientific details. The editors, one at NASA and the other at a conservation NGO, have brought together leading researchers in conservation remote sensing to share their experiences from project development through to application and emphasise the human side of these projects.

The book is divided into parts on object extraction from raster images, geospatial analysis formalisms and modeling, and data access.

Hyperspectral Satellites and System Design Shen-En Qian, 2020-04-02

Hyperspectral Satellites and System Design is the first book on this subject. It provides a systematic analysis and detailed design of the entire development process of hyperspectral satellites. Derived from the author's 25-year firsthand experience as a technical lead of space missions at the Canadian Space Agency, the book offers engineers, scientists, and decision makers detailed knowledge and guidelines on hyperspectral satellite system design, trade-offs, performance modeling, and simulation optimization from component to system level, subsystem design, and implementation strategies. This information will help reduce the risk, shorten the development period, and lower the cost of hyperspectral satellite missions. This book is a must-have reference for professionals in developing hyperspectral satellites and data applications. It is also an excellent introductory book for early practitioners and students who want to learn more about hyperspectral satellites and their applications.
