Multiphysics Modeling With Finite Element Methods William B J Zimmerman, 2006-10-25 Finite element methods for approximating partial differential equations that arise in science and engineering analysis find widespread application Numerical analysis tools make the solutions of coupled physics mechanics chemistry and even biology accessible to the novice modeler Nevertheless modelers must be aware of the limitations and difficulties in developing numerical models that faithfully represent the system they are modeling This textbook introduces the intellectual framework for modeling with Comsol Multiphysics a package which has unique features in representing multiply linked domains with complex geometry highly coupled and nonlinear equation systems and arbitrarily complicated boundary auxiliary and initial conditions But with this modeling power comes great opportunities and great perils Progressively in the first part of the book the novice modeler develops an understanding of how to build up complicated models piecemeal and test them modularly The second part of the book introduces advanced analysis techniques The final part of the book deals with case studies in a broad range of application areas including nonlinear pattern formation thin film dynamics and heterogeneous catalysis composite and effective media for heat mass conductivity and dispersion population balances tomography multiphase flow electrokinetic microfluidic networks plasma dynamics and corrosion chemistry As a revision of Process Modeling and Simulation with Finite Element Methods this book uses the very latest features of Comsol Multiphysics There are new case studies on multiphase flow with phase change plasma dynamics electromagnetohydrodynamics microfluidic mixing and corrosion In addition major

improvements to the level set method for multiphase flow to ensure phase conservation is introduced

Guide to Process Based Modeling of Lakes and Coastal Seas Anders Omstedt, 2015-07-21

This new edition of Guide to Process Based Modeling of Lakes and Coastal Seas brings the modeling up to date taking into account multiple stressors acting on aquatic systems. The combination of acidification and increasing amounts of anoxic waters associated with eutrophication puts severe stress on the marine environment. The detection and attribution of anthropogenic changes in coastal seas are therefore crucial and transparent modeling tools are increasingly important. Modeling the marine CO₂/O₂ system makes systematic studies on climate change and eutrophication possible and is fundamental for understanding the Earth system. This second edition also includes new sections on detection and attribution and on modeling future changes as well as improved exercises, updated software and datasets. This unique book will stimulate students and researchers to develop their modeling skills and make model codes and data transparent to other research groups. It uses the general equation solver PROBE to introduce process oriented numerical modeling and to build understanding of the subject step by step. The equation solver has been used in many applications particularly in Sweden and Finland with their numerous lakes, archipelago seas, fjords and coastal zones. It has also been used for process studies in the Polar Seas and the Mediterranean Sea and the approach is suitable for applications in many other environmental applications. Guide to Process Based Modeling of Lakes and Coastal Seas is a unique teaching tool for systematic learning of aquatic modeling approaches. Lake and ocean modeling from a new angle introduces aquatic numerical modeling using a process based approach, enables the thorough understanding of the physics and biogeochemistry of lakes and coastal seas, provides software, datasets and algorithms needed to reproduce all calculations and results in the book, provides a number of creative and stimulating exercises with solutions, addresses the interaction between climate change and eutrophication and is a good basis for learning Earth System Sciences.
