

#### NOTE

A low fluid level in the master cylinder may indicate pad wear.

### Disc Brake Fluid Change

Every time you remove the reservoir cap a small amount of dirt and moisture enters the brake fluid. The same thing happens if a leak occurs or when any part of the hydraulic system is loosened or disconnected. Dirt can clog the system and cause unnecessary wear. Water in the fluid vaporizes at high temperatures, impairing the hydraulic action and reducing brake performance.

To change brake fluid, refer to *Bleeding the System* in Chapter Ten. Continue adding new fluid to the master cylinder and bleeding at the calipers until the fluid leaving the calipers is clean and free of contaminants and air bubbles.

#### WARNING

Harley-Davidson specifies DOT 3 brake fluid for models produced prior to September, 1976 and DOT 5 for later

models. Mixing the two types of brake fluids can cause brake failure. If you own a 1976 or 1977 model take your frame number to a Harley-Davidson dealer to find out your bike's production date.

### Drum Brake Lining (Front and Rear)

The front and rear brake pads must be inspected for excessive or uneven wear, wear down to the rivet heads, scoring and oil or grease on the friction surface. Install new brake linings or replace the brake shoes and linings as described in Chapter Ten.

Because the drum brake units are not equipped with a wear indicator, the wheels must first be removed to inspect the brake linings. See Chapter Eight or Chapter Nine.

### Front Brake Adjustment (1966-1972 Drum Brake)

The front brake on these models requires periodic adjustment. See Figure 43 for this procedure.
