

Illus. 1 — Left Side Description

1. Gas tank cap. Tank capacity 3 gallons. Use Ethyl or other "Anti-Knock" gasoline.

2. Gas shut-off and reserve supply valve plunger. Gas is shut off when plunger is turned down finger-tight against its seat; unscrew plunger (but do not lift it) to use main gas supply; lift plunger to use reserve supply of approximately 3 quarts.

Caution—Gas and oil tank caps are not interchangeable. Oil tank cap which is the shorter cap is not vented; using it on gas tank will vacuum-lock tank.

3. Gear shifter lever—positions marked must be at neutral and clutch engaged when starting motor. Fully release clutch before shifting.

4. Ride control adjusting knob. Applies friction and snubs fork action to prevent front end bouncing at higher speeds. For normal service adjust free; tighten (turn right) to desired friction, when running at high speeds. It equipped with hydraulic shock absorber instead of ride control, snubbing action is automatic.

5. Front wheel brake hand lever. See description No. 14.

6. Horn button.

7. Headlamp dimming switch.

8. Spark control grip—turn forward to advance spark; turn outward to retard spark. Fully advanced is the proper normal running position. When motor is laboring under a hard pull, retard part way for better performance and to avoid knocking. Some motors start best with slight retard.

9. Ignition-light switch and switch lock. Switch OFF is straight ahead position. Turn left for parking with lights. Turn to first right position for ignition only—second right position for ignition and running lights. Bear in mind that lighting headlamp when motor is dead also turns ignition ON. Switch can be locked only in OFF and PARK positions.

See "Instrument Panel Signal Lights."

10. Carburetor choke lever. Down position—choke open Up position—ret choke. See "Starting Motor."

11. Carburetor air cleaner (extra equipment). See "Air Cleaner."

12. Positive battery terminal. Keep clean and connection tight.

13. Front wheel brake control adjustment. Properly adjusted, hand lever will move freely about one-quarter of its full movement before brake starts to take effect. If adjusted tighter, brake may drag.

14. Front wheel axle nut. See "Removing Front Wheel."

15. Clutch foot pedal. Toe down—clutch engaged; heel down—clutch released.

16. Gear shifter rod. After each re-adjustment of front chain, also whenever any irregularity is noticed with shifting and positive engagement in different positions, check the adjustment of this rod and re-adjust as necessary.

To check and re-adjust, set shifter lever 3 at neutral position, disconnect shifter rod, and with slight back and forward movement carefully "feel" transmission lever into exact position where shifter spring plunger (inside transmission) seats fully in retaining notch. Next, see that lever 3 is at exact position and then re-adjust length of rod to fit. It is advisable to repeat this check in low and second positions to be sure of having best all-around adjustment.

Shifter control must be kept in correct adjustment, otherwise, driving dogs on shifting clutches inside transmission will rattle fully engage in the different positions, and are likely to become damaged from jumping out of engagement under driving load.

17. Gasoline strainer. Turn off lower end, remove screen, and clean and flush at least once a month, or oftener if the need of cleaning is indicated by irregular carbonation. See No. 25.

18. Timing inspection hole plug. To check ignition timing or reset circuit breaker assembly after it has been lifted out, follow the marks indicating original factory setting.

With front piston on compression stroke (directly after inlet valve closes, turning motor ahead) and flywheel mark showing slightly forward of center of inspection hole (piston is 5/32 inch before top center) the marks on circuit breaker head and breaker cam must register as shown in circuit breaker illustration No. 3.

19. Motor or serial number. Always give this number when ordering parts or making any inquiry about your motorcycle.

20. Clutch foot pedal cable. See "Adjusting Clutch Controls." Check adjustment after each front chain re-adjustment.

21. Front chain inspection hole cover.

22. Clutch inspection hole cover.

23. Left side rear wheel adjusting screw. By means of this screw and a like screw on right side, rear wheel is moved to re-adjust rear chain. See "Adjusting Rear Chain."

24. Carburetor bowl drain plug. Remove plug, drain and flush bowl each time gasoline strainer No. 18 is serviced.
