Barret,P. Bornard,B. Meyer,1996-12-31 The authors writing with the experience and technological background of Electricite de France an organisation at the forefront of simulation methods provide a comprehensive and comprehensible treatment of the modelling and simulation techniques currently in use The text emphasises model design applied to power plants producing energy generators and motors carrying out energy transformations and networks transmitting energy The systems are analysed considering each process from steady state to fast transients with detailed explanation of the problem to be solved the choice of models and methods for optimising efficiency Many examples and references are provided The book is essential reading for anyone involved in power system engineering from practising design and development engineers to researchers and postgraduate and advanced graduate students      *The Oxford Handbook of Social Neuroscience* Jean Decety,John T. Cacioppo,2015-04-15 The complexities of the brain and nervous system make neuroscience an inherently interdisciplinary pursuit one that comprises disparate basic clinical and applied disciplines Behavioral neuroscientists approach the brain and nervous system as instruments of sensation and response cognitive neuroscientists view the same systems as a solitary computer with a focus on representations and processes The Oxford

Handbook of Social Neuroscience marks the emergence of a third broad perspective in this field Social neuroscience emphasizes the functions that emerge through the coaction and interaction of conspecifics the neural mechanisms that underlie these functions and the commonality and differences across social species and superorganismal structures With an emphasis on the neural hormonal cellular and genetic mechanisms underlying social behavior social neuroscience places emphasis on the associations and influences between social and biological levels of organization This complex interdisciplinary perspective demands theoretical methodological statistical and inferential rigor to effectively integrate basic clinical and applied perspectives on the nervous system and brain Reflecting the diverse perspectives that make up this field The Oxford Handbook of Social Neuroscience brings together perspectives from across the sciences in one authoritative volume

With the Internet the proliferation of Big Data and autonomous systems mankind has entered into an era of digital obesity In this century computational intelligence such as thinking machines have been brought forth to process complex human problems in a wide scope of areas from social sciences economics and biology medicine and social networks to cyber security The Handbook of Computational Intelligence in two volumes prompts readers to look at these problems from a non traditional angle It takes a step by step approach supported by case studies to explore the issues that have arisen in the process The Handbook covers many classic paradigms as well as recent achievements and future promising developments to solve some of these very complex problems Volume one explores the subjects of fuzzy logic and systems artificial neural networks and learning systems Volume two delves into evolutionary computation hybrid systems as well as the applications of computational intelligence in decision making the process industry robotics and autonomous systems This work is a one stop shop for beginners as well as an inspirational source for more advanced researchers It is a useful resource for lecturers and learners alike      **Public Works Manual** ,1995      **Foundations of Probabilistic Logic Programming** Fabrizio Riguzzi,2023-07-07 Since its birth the field of Probabilistic Logic Programming has seen a steady increase of activity with many proposals for languages and algorithms for inference and learning This book aims at providing an overview of the field with a special emphasis on languages under the Distribution Semantics one of the most influential approaches The book presents the main ideas for semantics inference and learning and highlights connections between the methods Many examples of the book include a link to a page of the web application <http://cplint.eu> where the code can be run online This 2nd edition aims at reporting the most exciting novelties in the field since the publication of the 1st edition The semantics for hybrid programs with function symbols was placed on a sound footing Probabilistic Answer Set Programming gained a lot of interest together with the studies on the complexity of inference Algorithms for solving the MPE and MAP tasks are now available Inference for hybrid programs has changed dramatically with the introduction of Weighted Model Integration With respect to learning the first approaches for neuro symbolic integration have appeared together with algorithms for learning the structure for hybrid programs Moreover given the cost of learning PLPs various works proposed language restrictions to speed up learning and improve its scaling      **Nuclear Science Abstracts** ,1976-03      **Energetic Compounds** Mohammad Hossein Keshavarz,Thomas M. Klapötke,2017-07-10 Since the synthesis and development of new energetic materials require identification of promising candidates for additional study and elimination of poor candidates from further consideration it is important for engineers scientists and industries to assess the performance of the new compounds for reducing costs associated with synthesis testing and evaluation of these materials Nowadays different approaches have been used to predict the performance of energetic compounds which can be recognized to be cost effective environmentally desirable and time saving capabilities This book reviews different methods for the assessment of the performance of an energetic compound

through its heat of detonation detonation pressure detonation velocity detonation temperature Gurney energy and power strength The book also focuses on the detonation pressure and detonation velocity of non ideal aluminized energetic compounds Simple and reliable methods are demonstrated in detail where they can be easily used for the design synthesis and development of novel energetic compounds *Frontiers in Integrative Neuroscience Editor's Pick 2021* Elizabeth B. Ekwil Sah,2007 This issue of ECS Transactions contains the papers presented in the symposium on Silicon Nitride Silicon Dioxide Thin Insulating Films and Emerging Dielectrics held May 6 11 2007 in Chicago Papers were presented on deposition characterization and applications of the dielectrics including high and low k dielectrics as well as interface states device characterization reliability and modeling **Declarative Logic Programming** Michael Kifer,Yanhong Annie Liu,2018-09-19 The idea of this book grew out of a symposium that was held at Stony Brook in September 2012 in celebration of David S Warren s fundamental contributions to Computer Science and the area of Logic Programming in particular Logic Programming LP is at the nexus of Knowledge Representation Artificial Intelligence Mathematical Logic Databases and Programming Languages It is fascinating and intellectually stimulating due to the fundamental interplay among theory systems and applications brought about by logic Logic programs are more declarative in the sense that they strive to be logical specifications of what to do rather than how to do it and thus they are high level and easier to understand and maintain Yet without being given an actual algorithm LP systems implement the logical specifications automatically Several books cover the basics of LP but focus mostly on the Prolog language with its incomplete control strategy and non logical features At the same time there is generally a lack of accessible yet

comprehensive collections of articles covering the key aspects in declarative LP These aspects include among others well founded vs stable model semantics for negation constraints object oriented LP updates probabilistic LP and evaluation methods including top down vs bottom up and tabling For systems the situation is even less satisfactory lacking accessible literature that can help train the new crop of developers practitioners and researchers There are a few guides on Warren s Abstract Machine WAM which underlies most implementations of Prolog but very little exists on what is needed for constructing a state of the art declarative LP inference engine Contrast this with the literature on say Compilers where one can first study a book on the general principles and algorithms and then dive in the particulars of a specific compiler Such resources greatly facilitate the ability to start making meaningful contributions quickly There is also a dearth of articles about systems that support truly declarative languages especially those that tie into first order logic mathematical programming and constraint solving LP helps solve challenging problems in a wide range of application areas but in depth analysis of their connection with LP language abstractions and LP implementation methods is lacking Also rare are surveys of challenging application areas of LP such as Bioinformatics Natural Language Processing Verification and Planning The goal of this book is to help fill in the previously mentioned void in the LP literature It offers a number of overviews on key aspects of LP that are suitable for researchers and practitioners as well as graduate students The following chapters in theory systems and applications of LP are included
