

Adjusting rack connected to the pilot control

This diagram shows a detailed cross-section of a mechanical governor assembly. The assembly is housed within a red-painted metal casing. At the top, a vertical shaft is connected to an adjusting rack. Below this, a speeder spring is coiled around the shaft. A flyweight is mounted on the shaft, with a governor pilot valve positioned just below it. Further down, a governor oil pump is visible, which is part of the lubrication system. At the bottom, a drive gear from the engine is shown meshing with a smaller gear on the governor's shaft. The entire assembly is designed to regulate engine speed by adjusting the fuel supply based on centrifugal force and oil pressure.
