Handbook Of Solubility Data For Pharmaceuticals:

Handbook of Solubility Data for Pharmaceuticals Abolghasem Jouyban, 2009-08-26 Aqueous solubility is one of the major challenges in the early stages of drug discovery One of the most common and effective methods for enhancing solubility is the addition of an organic solvent to the aqueous solution Along with an introduction to cosolvency models the Handbook of Solubility Data for Pharmaceuticals provides an extensive datab **Handbook of Aqueous Solubility Data** Samuel H.

Yalkowsky, Yan He, Parijat Jain, 2016-04-19 Over the years researchers have reported solubility data in the chemical pharmaceutical engineering and environmental literature for several thousand organic compounds Until the first publication of the Handbook of Aqueous Solubility Data this information had been scattered throughout numerous sources Now newly revised the second edition of **Handbook of Aqueous Solubility Data** Samuel H. Yalkowsky, 2003-03-26 Over the years

researchers have reported solubility data in the chemical pharmaceutical engineering and environmental literature for several thousand organic compounds Until now this information has been scattered throughout the literature Containing over 16 000 solubility data points for more than 4 000 organic compounds Handbook of Aqueous Handbook of Bioequivalence

Testing Sarfaraz K. Niazi, 2014-10-29 As the generic pharmaceutical industry continues to grow and thrive so does the need to conduct adequate efficient bioequivalence studies In recent years there have been significant changes to the statistical models for evaluating bioequivalence In addition advances in the analytical technology used to detect drug and metabolite levels have m **E-agriculture in action: Blockchain for agriculture** Food and Agriculture Organization of the United

Nations, International Telecommunication Union, 2019-02-15 The growth of ICT in the last decade has provided many opportunities to overcome some of the challenges faced by the agriculture sector Recent developments such as the increase in the use of mobile broadband access devices the Internet of things IoT drones smart networks capacity for big data analytics and artificial intelligence have provided agriculture stakeholders with some key tools and technologies to improve production and marketing processes for example in agriculture and allied fields One of the most discussed technologies of late is Distributed Ledger Technology DLT Blockchain is one implementation of DLTs This publication aims to demystify the technology provide some thoughts on the opportunities and challenges in implementing blockchain based systems as well as document some case studies on the use of blockchain for agriculture **Toxicity and Drug Testing** Bill Acree, 2012-02-10

Modern drug design and testing involves experimental in vivo and in vitro measurement of the drug candidate s ADMET adsorption distribution metabolism elimination and toxicity properties in the early stages of drug discovery Only a small percentage of the proposed drug candidates receive government approval and reach the market place Unfavorable pharmacokinetic properties poor bioavailability and efficacy low solubility adverse side effects and toxicity concerns account for many of the drug failures encountered in the pharmaceutical industry Authors from several countries have contributed chapters detailing regulatory policies pharmaceutical concerns and clinical practices in their respective countries with the

expectation that the open exchange of scientific results and ideas presented in this book will lead to improved pharmaceutical products

Poorly Soluble Drugs Gregory K. Webster, Robert G. Bell, J. Derek Jackson, 2017-01-06 This book is the first text to provide a comprehensive assessment of the application of fundamental principles of dissolution and drug release testing to poorly soluble compounds and formulations Such drug products are vis vis their physical and chemical properties inherently incompatible with aqueous dissolution However dissolution methods are required for product development and selection as well as for the fulfillment of regulatory obligations with respect to biopharmaceutical assessment and product quality understanding The percentage of poorly soluble drugs defined in classes 2 and 4 of the Biopharmaceutics Classification System BCS has significantly increased in the modern pharmaceutical development pipeline This book provides a thorough exposition of general method development strategies for such drugs including instrumentation and media selection the use of compendial and non compendial techniques in product development and phase appropriate approaches to dissolution development Emerging topics in the field of dissolution are also discussed including biorelevant and biphasic dissolution the use on enzymes in dissolution testing dissolution of suspensions and drug release of non oral products Of particular interest to the industrial pharmaceutical professional a brief overview of the formulation and solubilization techniques employed in the development of BCS class 2 and 4 drugs to overcome solubility challenges is provided and is complemented by a collection of chapters that survey the approaches and considerations in developing dissolution methodologies for enabling drug delivery technologies including nanosuspensions lipid based formulations and stabilized amorphous drug formulations

Thermodynamics of Solutions Eli Ruckenstein, Ivan L. Shulgin, 2009-06-17 This book consists of a number of papers regarding the thermodynamics and structure of multicomponent systems that we have published during the last decade Even though they involve different topics and different systems they have something in common which can be considered as the signature of the present book First these papers are concerned with difficult or very nonideal systems i e systems with very strong interactions e g hydrogen bonding between components or systems with large differences in the partial molar volumes of the components e g the aqueous solutions of proteins or systems that are far from normal conditions e g critical or near critical mixtures Second the conventional thermodynamic methods are not sufficient for the accurate treatment of these mixtures Last but not least these systems are of interest for the pharmaceutical biomedical and related industries In order to meet the thermodynamic challenges involved in these complex mixtures we employed a variety of

traditional methods but also new methods such as the fluctuation theory of Kirkwood and Buff and ab initio quantum mechanical techniques The Kirkwood Buff KB theory is a rigorous formalism which is free of any of the approximations usually used in the thermodynamic treatment of multicomponent systems This theory appears to be very fruitful when applied to the above mentioned difficult systems
