Handbook Of Theories Of Aging Second Edition:

Handbook of Theories of Aging, Second Edition Dr. Vern L. Bengtson, PhD, Daphna Gans, PhD, Norella Putney, PhD, Merrill Silverstein, PhD, 2008-10-27 The field of gerontology has often been criticized for being data rich but theory poor. The editors of this book address this issue by stressing the importance of theory in gerontology. While the previous edition focused on multidisciplinary approaches to aging theory, this new edition provides cross disciplinary integrative explanations of aging theory. The contributors of this text have reached beyond traditional disciplinary boundaries to partner with researchers in adjacent fields in studying aging and age related phenomena. This edition of the Handbook consists of 39 chapters written by 67 internationally recognized experts in the field of aging. It is organized in seven sections reflecting the major theoretical developments in gerontology over the past 10 years. Special Features: Comprehensive coverage of aging theory focusing on the biological, psychological, and social aspects of aging. A section dedicated to discussing how aging theory informs public policy. A concluding chapter summarizing the major themes of aging and offering predictions about the future of theory development. Required reading for graduate students and post doctoral fellows. This textbook represents the current status of theoretical development in the study of aging.

Health, Illness, and Optimal Aging, Second Edition

Carolyn Aldwin, Carolyn M. Aldwin, Diane Gilmer, 2013-01-17 Aldwin and Gilmer have supplied an interesting textual model for examining health, illness, and aging. Their homogenized approach to aging research is refreshing and insightful. Anthropology and Aging Quarterly: Clearly written at a level for college students, this is an excellent resource on aging. Highly recommended. Choice: Current Reviews for Academic Libraries: Spanning the biological and psychosocial aspects of aging, this upper level undergraduate and graduate text integrates current findings in biology, psychology, and the social sciences to provide comprehensive multidisciplinary coverage of the aging process. This new edition incorporates the tremendous amount of research that has come to light since the first edition was published. From a physical perspective, the text examines age related changes and disease related processes, the demography of the aging population, aging theories, and how to promote optimal aging. Coverage of the psychosocial aspects of aging encompasses mental health, stress, and coping, spirituality, and caregiving in later years. The authors address demographic, theoretical, and methodological issues on aging, including a worldwide overview of aging demographics. The book reviews biological and psychosocial theories and offers much needed information on longitudinal design and statistics as they relate to aging research. It discusses the aging of the major organ systems, the brain and sensory systems, and the endocrine and immune systems, basic anatomy and physiology, normal, impaired, and optimal aging, and functional health. Psychosocial factors that affect health are addressed, including the interplay between physical health and mental health, stress, coping, and social support. The text also covers current issues in social gerontology, including such promising new trends as gerontechnology and Green Houses, and provides information on health promotion programs. New to the Second Edition: Information involving retirement, volunteer opportunities, housing, and

adaptation to health changes Coverage of economics and aging including information on social security and other retirement income and the future of Medicare and Medicaid Significant new information about the regulatory systems Revised and updated chapters on death and dying and optimal aging Discussions on two models of optimal aging and valuable tips for its promotion URLs to relevant websites for additional information
