Grid Computing For Developers Programming Series:

Grid Computing For Developers Vladimir Silva, 2006-04-21 Many industry analysts believe that grid computing will be the next big technology wave. It is so promising that major technology companies such as IBM, Microsoft, Oracle, and Sun are allocating significant resources for grid research and development. *Grid Computing: Designing Software-Intensive Systems: Methods and Principles* Tiako, Pierre F., 2008-07-31 This book addresses the complex issues associated with software engineering environment capabilities for designing real time embedded software systems. Provided by publisher **Grid and Cloud Computing: Concepts, Methodologies, Tools and Applications** Management Association, Information Resources, 2012-04-30 This reference presents a vital compendium of research detailing the latest case studies, architectures, frameworks, methodologies, and research on Grid and Cloud Computing. *Higher-Order Components for Grid Programming* Jan Dünneberger, Sergei Gorlatch, 2009-06-24 A major challenge in grid computing remains the application software development for this new kind of infrastructure. Grid application programmers have to take into account several complicated aspects: distribution of data and computations, parallel computations on different sites and processors, heterogeneity of the involved computers, load balancing, etc. Grid programmers thus demand novel programming methodologies that abstract over such technical details while preserving the beneficial features of modern grid middleware. For this purpose, the authors introduce Higher Order Components (HOCs). HOCs implement generic parallel distributed processing patterns together with the required middleware support and they are offered to users via a high level service interface. Users only have to provide the application specific pieces of their programs as parameters while low level implementation details such as the transfer of data across the grid are handled by the HOCs. HOCs were developed within the CoreGRID European Network of Excellence and have become an optional extension of the popular Globus middleware. The book provides the reader with hands on experience describing a broad collection of example applications from various fields of science and engineering including biology, physics, etc. The Java code for these examples is provided online, complementing the book. The expected application performance is studied and reported for extensive performance experiments on different testbeds including grids with worldwide distribution. The book is targeted at graduate students, advanced professionals, and researchers in both academia and industry. Readers can raise their level of knowledge about methodologies for programming contemporary parallel and distributed systems and furthermore they can gain practical experience in using distributed software. Practical examples show how the complementary online material can easily be adopted in various new projects. **Software Applications: Concepts, Methodologies, Tools, and Applications** Tiako, Pierre F., 2009-03-31 Includes articles in topic areas such as autonomic computing, operating system architectures, and open source software technologies and applications. *Numerical Methods and Applications* Lirkov Ivan Dimov, Stefka Dimova, Natalia Kolkovska, 2011-01-27 This book constitutes the thoroughly refereed post conference proceedings of the 7th International Conference on Numerical Methods and

Applications NMA 2010 held in Borovets Bulgaria in August 2010 The 60 revised full papers presented together with 3 invited papers were carefully reviewed and selected from numerous submissions for inclusion in this book The papers are organized in topical sections on Monte Carlo and quasi Monte Carlo methods environmental modeling grid computing and applications metaheuristics for optimization problems and modeling and simulation of electrochemical processes

Grid Computing: Software Environments and Tools Omer F. Rana, Jose Cardoso Cunha, 2007-07-03 Grid Computing requires the use of software that can divide and farm out pieces of a program to as many as several thousand computers This book explores processes and techniques needed to create a successful Grid infrastructure Leading researchers in Europe and the US look at the development of specialist tools and environments which will encourage the convergence of the parallel programming distributed computing and data management communities Specific topics covered include An overview of structural and behavioural properties of Computer Grid applications Discussion of alternative programming techniques Case studies displaying the potential of Computer Grids in solving real problems This book is unique in its outline of the needs of Computational Grids both in integration of high end resources using OGSA Globus and the loose integration of Peer 2 Peer Entropia United Devices Readers will gain an insight on the limitations of existing approaches as well as the standardisation activities currently taking place
