Machine Learning and Its Application to Reacting Flows Nedunchezian Swaminathan,Alessandro Parente,2023-01-01 This open access book introduces and explains machine learning ML algorithms and techniques developed for statistical inferences on a complex process or system and their applications to simulations of chemically reacting turbulent flows These two fields ML and turbulent combustion have large body of work and knowledge on their own and this book brings them together and explain the complexities and challenges involved in applying ML techniques to simulate and study reacting flows This is important as to the world s total primary energy supply TPES since more than 90% of this supply is through combustion technologies and the non negligible effects of combustion on environment Although alternative technologies based on renewable energies are coming up their shares for the TPES is are less than 5% currently and one needs a complete paradigm shift to replace combustion sources Whether this is practical or not is entirely a different question and an answer to this question depends on the respondent However a pragmatic analysis suggests that the combustion share to TPES is likely to be more than 70% even by 2070 Hence it will be prudent to take advantage of ML techniques to improve combustion sciences and technologies so that efficient and greener combustion systems that are friendlier to the environment can be designed The book covers the current state of the art in these two topics and outlines the challenges involved merits and drawbacks of using ML for turbulent combustion simulations including avenues which can be explored to overcome the challenges The required mathematical equations and backgrounds are discussed with ample references for readers to find further detail if they wish This book is unique since there is not any book with similar coverage of topics ranging from big data analysis and machine learning algorithm to their applications for combustion science and system design for energy generation

Theories of Human Communication Stephen W. Littlejohn,Karen A.

Foss, John G. Oetzel, 2021-05-07 For over forty years *Theories of Human Communication* has facilitated the understanding of the theories that define the discipline of communication. The authors present a comprehensive summary of major communication theories, current research, extensions, and applications in a thoughtfully organized and engaging style. Part I of the extensively updated twelfth edition sets the stage for how to think about and study communication. The first chapter establishes the foundations of communication theory. The next chapter reviews four frameworks for organizing the theories and their contributions to the nature of inquiry. Part II covers theories centered around the communicator, message, medium, and communication with the nonhuman. Part III addresses theories related to communication contexts: relationship, group, organization, health, culture, and society. From the Source, contributions from theorists provide insight into the inspirations, motivations, and goals behind the theories. Online instructor's resource materials include sample syllabi, key terms, exam questions, and text graphics. The theories include those important for their continuing influence in the field as well as emerging theories that encourage thinking about issues in new ways. For a reasonable price, readers are able to explore the patterns, trends, trajectories, and intricacies of the landscape of communication theory and will have an invaluable resource for future reference.

Enabling Things to Talk Alessandro Bassi, Martin Bauer, Martin Fiedler, Thorsten Kramp, Rob van Kranenburg, Sebastian Lange, Stefan Meissner, 2013-10-28 The Internet of Things (IoT) is an emerging network superstructure that will connect physical resources and actual users. It will support an ecosystem of smart applications and services bringing hyper connectivity to our society by using augmented and rich interfaces. Whereas in the beginning IoT referred to the advent of barcodes and Radio Frequency Identification (RFID) which helped to automate inventory tracking and basic identification, today IoT is characterized by a dynamic trend toward connecting smart sensors, objects, devices, data, and applications. The next step will be cognitive IoT, facilitating object and data re-use across application domains and leveraging hyper connectivity, interoperability, solutions, and semantically enriched information distribution. The Architectural Reference Model (ARM) presented in this book by the members of the IoT A project team driving this harmonization effort makes it possible to connect vertically closed systems, architectures, and application areas so as to create open, interoperable systems and integrated environments and platforms. It constitutes a foundation from which software companies can capitalize on the benefits of developing consumer-oriented platforms including hardware, software, and services. The material is structured in two parts. Part A introduces the general concepts developed for and applied in the ARM. It is aimed at end users who want to use IoT technologies, managers interested in understanding the opportunities generated by these novel technologies, and system architects who are interested in an overview of the underlying basic models. It also includes several case studies to illustrate how the ARM has been used in real-life scenarios. Part B then addresses the topic at a more detailed technical level and is targeted at readers with a more scientific or technical background. It provides in-depth guidance on the ARM, including a detailed description of a process for generating concrete architectures as well as reference manuals with guidelines on how

to use the various models and perspectives presented to create a concrete architecture Furthermore best practices and tips on how system engineers can use the ARM to develop specific IoT architectures for dedicated IoT solutions are illustrated and exemplified in reverse mapping exercises of existing standards and platforms

Challenges and Opportunities for the EU Common Fisheries Policy Application in the Mediterranean and Black Sea Simone Libralato, Francesco Colloca, Ali Cemal Gücü, Christos D. Maravelias, Cosimo Solidoro, Sebastián Villasante, Massimiliano Cardinale, 2019-01-11 The application of the Common Fisheries Policy CFP in the Mediterranean and Black Sea faces several challenges also because of large ecological economic political and institutional differences across the basin The challenge of CFP application is exacerbated by the legal administrative situation with large areas outside national EU jurisdictions by the different development of fisheries that result in fleet capacities highly different on opposite shores of some sub basins as well as by uneven monitoring and data availability across the basins that result in situations that hamper sustainable management This book collates analyses related to the application of the principles included in the CFP in Mediterranean and Black Sea including assessments of current status scenario analyses visions of best solutions evaluation of critical hot spots and effects of regionalization of fisheries management The eBook tackles from local to transboundary issues and solutions and provides a broad vision of problems together with important practical solutions for CFP application in the Mediterranean and Black Sea
