Until recently more and more consumers in many countries were opting to buy organic food over conventional food resulting in a radical shift in food retailing. This was due to concerns over chemical residues, food poisoning resulting in recalls, food scares such as mad cow disease, issues like gene modified GM foods, antibiotics, hormones, cloning and concerns over the way plants and animals are being grown commercially as food sources. As a result there has been an expansion of the organic industry and the supply of organic foods at farmers markets, supermarkets and specialty stores. *Organic Production and Food Quality: A Down to Earth Analysis* is the first comprehensive book on how organic production methods influence the safety and quality of foods based on an unbiased assessment of the latest scientific findings.
