Visual Inspection

Some problems can be detected by close visual inspection of

HANDCUFF NOMENCLATURE

the restraint. Finding one or more of the following issues may mean the restraint will not function or perform properly.

- Single Strand is bent or not aligned properly
- Worn or damaged Single Strand teeth
- Double Strand are pinched closed or spread open
- Signs of rust at Single Strand rivet, Double Lock hole or in lock area
- Broken or missing lock parts
- Key Post Missing
- Foreign object seen in the Key Hole
- Swivel is bent
- Links between cuffs are bent or broken

Function Check of the Lock

To test for possible matching and lock related issues conduct the following steps:

1. Check Single Strand Action: Swing the Single Strand through the lock three or four times. Notice the feel and sound of the ratcheting action. It should be consistent in feel and sound. Rough or inconsistent action may indicate lock problems.
2. Check Double Lock at Large Range: Engage or lock the Single Strand two or three "clicks". Double Lock the restraint. Check to see if the Double Lock holds by pushing and pulling on the Single Strand to try to force it out of the set position. If the Double Lock does not hold the restraint may have worn single strand teeth, be out of alignment or have a problem with the internal lock parts.
3. Un-Double Lock the restraint. Re-check the Single Strand Action as above.
4. Check Double Lock at Mid Range: Engage or lock the Single Strand at its mid-range. Double Lock the restraint. Check to see if the Double Lock holds by pushing and pulling on the Single Strand to try to force it out of the set position. If the Double Lock does not hold the restraint may have worn single strand teeth, be out of alignment or have a problem with the internal lock parts.
5. Un-Double Lock the restraint. Re-check the Single Strand Action as above.
6. Check Double Lock at Small Range: Engage or lock the Single Strand near its smallest size. Double Lock the restraint. Check to see if the Double Lock holds by pushing and pulling on the Single Strand to try to force it out of the set position. If the Double Lock does not hold the restraint may have worn single strand teeth, be out of alignment or have a problem with the internal lock parts.
7. Repeat steps 1 thru 6 on other half of the restraint.

Standard Operating Procedures

It is important to remember that handcuffs are a temporary restraining device. They are not intended for long term immobilization. It is recommended that periodic checks be made of the subject's hands and wrists to avoid soft tissue or nerve damage.

Handcuffs do not provide complete restraint. A handcuffed subject should be considered a threat. The restrained subject should be kept under observation, when possible.

This device is not designed to be fully pick proof, shim proof or tamper resistant. It is recommended that periodic checks of the restraint be made to ensure it is secured as intended.

Handcuffs should be carried in such a manner that they are accessible and ready for immediate use.

To protect the restraint and to prevent loss, carry your handcuffs in a covered case. The case should be placed where the handcuffs can be quickly retrieved. Store the handcuffs in the "loaded" position by pushing the single strand through the ratchet until the last click. (The tip of the single strand will extend above the double strand). In this position they are ready for immediate and effective use. Make sure the double lock is not engaged.

Two keys are provided. Carry both keys at all times. One should be readily available for the removal of the handcuffs, the other concealed on your person for emergency use.

In general, handcuff the subject first and then conduct a thorough search. The search procedure should insure that there are no weapons or foreign objects which could be used to pick the locks (i.e., ball point pen ink cartridges, pins, metal strips, etc.).

When practical, approach a subject from the side or rear and watch for any unexpected moves. Attempt to keep the subject off balance when applying the handcuffs. Keep yourself in a well balanced, alert stance while performing the handcuffing sequence.

Whenever possible handcuff the subject with the hands behind the back. If the subject is injured or has a physical disability handcuffing behind the back may not be possible or should be avoided.

After both wrists are secured, immediately double lock the handcuffs. This will prevent over tightening and make picking the locks more difficult. Properly adjusted, they should fit snugly and securely. Check that the skin is not pinched. Over tightening can cause soft tissue and/or nerve damage. Perform periodic checks to insure the individual's hands are in good condition and to deter any possible escape.

Never handcuff a subject to yourself, to a fixed object, or to a vehicle.

Removing handcuffs can present as many possible safety threats as applying them. It is important to follow a handcuff removal procedure that keeps the subject off balance and discourages an escape attempt or assault. Having other law enforcement personnel present is highly recommended.
