Krishnamoorthy Lakshmi, Antonio Mubango Hogueane, 2023-02-15 Renewable energy is energy that is collected from renewable resources that are naturally replenished on a human timescale. Renewable energy includes sources such as sunlight, tides, waves, wind, rain, and geothermal heat. According to BP's 2018 Energy Outlook, renewable energy will be the fastest growing source of energy, increasing fivefold by 2040, thus providing around 14% of global primary energy at this future point. On the other hand, climate change is bringing about rising temperatures, which have significant negative impacts on humans and the environment, and transitioning to renewable energy sources such as biofuels can help meet this challenge. Transitioning to renewable energy and reducing reliance on fossil fuels is one way to help slow down the effects of climate change. While renewables used to be a more expensive option, new clean energy technologies are lowering costs and helping to move economies away from fossil fuels. The 1st International Conference on Climate Change and Ocean Renewable Energy (CCORE 2022) is a virtual conference held from November 4-7, 2022, presenting experiences and ideas through research talks and presentations from diverse fields in climate change and ocean renewable energy. This event offers a platform in bringing together a forum for students, postdocs, and established scientists to exchange their ideas and contribute to an integrative approach to climate change and ocean renewable energy.
