Food and Nutrition Bulletin, 2014 *GM maize in Ethiopia: An ex ante economic*

assessment of TELA, a drought tolerant and insect resistant maize Yirga, Chilot, Nin-Pratt, Alejandro, Zambrano, Patricia, Wood-Sichra, Ulrike, Habte, Endeshaw, Kato, Edward, Komen, John, Falck-Zepeda, José Benjamin, Chambers, Judith A., 2020-05-07 Ethiopian economy has grown at an average rate that surpasses that of almost any other economy in the region over the last two decades At the center of this development is the high priority placed on accelerating agricultural growth and achieving food security and poverty alleviation Over the years maize has become a main food security crop widely produced and consumed by smallholder farmers second only to teff in terms of area Despite the sustained growth of maize production over the years its yields continue to be lower than the world's average Of the many abiotic and biotic constraints that maize faces insect attacks and droughts are two critical ones The genetically modified TELA maize can help address these constraints This paper estimates the economic benefits of adopting this new technology and the opportunity cost that Ethiopia will incur if its adoption is delayed The analysis is conducted using an economic surplus partial equilibrium model run with the newly developed DREAMpy software data drawn from the Ethiopia Socioeconomic Survey Wave 3 2015 2016 econometric estimations using these survey data and other local data and sources The estimations show that if the drought tolerant and insect resistant TELA maize is planted in 2023 the net present value of benefits for producers and consumers would be around 850 million Producers from the mid altitude maize zone will be the main beneficiaries given the targeted area of TELA maize Consumers from all areas will benefit from the projected reduction in price If the adoption of this new technology is delayed by 5 years the estimated net present value of benefits will fall by 30 percent These costs underscore the importance of having a regulatory system that is efficient predictable and transparent and ensures that the projected economic benefits are realized Healthy Urbanism Helen Pineo, 2022-05-11 The globally distributed health impacts of environmental degradation and widening inequalities require a fundamental shift in understandings of healthy urbanism This book redefines the meaning and form of healthy urban environments urging planners and design professionals to consider how their work impacts population health and wellbeing at multiple spatial and temporal scales The concepts of equity inclusion and sustainability are central to this framing reversing the traditional focus on individuals their genes and lifestyle choices to one of structural factors that affect health Integrating theory and concepts from social epidemiology sustainable development and systems thinking with practical case studies this book will be of value for students and practitioners **Local, Traditional and Indigenous Food Systems in the 21st Century to Combat Obesity, Undernutrition and Climate Change, 2nd edition** Rebecca Kanter, Sofia Boza, Gina Kennedy, 2023-07-31 Traditional and indigenous food systems have existed for centuries and were in balance with local food supplies globally However between the mid 20th and early 21st century the green revolution dramatically altered food production which in turn affected the inclusivity of traditional production systems within food systems and subsequently traditional dietary intakes This change was accompanied by lifestyle changes and spurred a global nutrition transition Today the world faces a global syndemic of

obesity undernutrition and climate change A new call to action to create food systems that nourish people and sustain the planet is needed Traditional and indigenous food systems have long been recognized as systems that can both support good human nutrition as well as maintain a balance with nature There is an underutilized knowledge base around traditional and indigenous food systems This includes the knowledge of nutritious species traditional culinary preparations and cultural practices Greater agricultural production of underutilized species can result in more sustainable agricultural and food systems which can also help improve livelihoods and food security Traditional and indigenous cultural practices with respect to both land and water management as well as culinary practices contribute to both sustainable food production and consumption These practices require a greater evidence base in order to be incorporated into public health nutrition initiatives related to improving dietary quality such as food based dietary guidelines for example An increased focus on the importance of local traditional and indigenous food systems and nutrition could therefore help countries to improve human nutrition and ideally help mitigate the global syndemic of obesity undernutrition and climate change This Research Topic will focus on documenting diverse local food systems and promoting elements within them that can help improve nutrition and health both human and planetary in various ways including the livelihood development of knowledge holders
