Mallon,2016-06-08 Antelopes constitute a fundamental part of ecosystems throughout Africa and Asia where they act as habitat architects dispersers of seeds and prey for large carnivores The fascination they hold in the human mind is evident from prehistoric rock paintings and ancient Egyptian art to today s wildlife documentaries and popularity in zoos In recent years however the spectacular herds of the past have been decimated or extirpated over wide areas in the wilds and urgent conservation action is needed to preserve this world heritage for generations to come As the first book dedicated to antelope conservation this volume sets out to diagnose the causes of the drastic declines in antelope biodiversity and on this basis identify the most effective points of action In doing so the book covers central issues in the current conservation debate especially related to the management of overexploitation habitat fragmentation disease transmission climate change populations genetics and reintroductions The contributions are authored by world leading experts in the field and the book is a useful resource to conservation scientists and practitioners researchers and students in related disciplines as well as interested lay people

Golden-winged Warbler Ecology, Conservation, and Habitat Management Henry M. Streby,David E. Andersen,David Buehler,2016-10-26 Golden winged Warblers Vermivora chrysoptera are migratory songbirds that breed in temperate North America primarily in the Great Lakes region with remnant populations throughout the Appalachian Mountains and winter in Central and northern South America Their breeding range has contracted dramatically in the

Appalachian Mountains and many populations have dramatically declined likely due to habitat loss competition and interbreeding with Blue winged Warblers *Vermivora pinus* and global climate change As a result of population declines in much of the eastern portion of their breeding range Golden winged Warblers are listed as endangered or threatened in 10 U S states and in Canada and have been petitioned for protection under the U S Endangered Species Act Published in collaboration with and on behalf of The American Ornithological Society this volume in the highly regarded Studies in Avian Biology series compiles extensive current research on Golden winged Warblers and summarizes what is known and identifies many remaining unknowns providing a wealth of peer reviewed science on which future research and listing decisions can be based **Reintroduction of Fish and Wildlife Populations** David S. Jachowski, Joshua J. Millsaugh, Paul L.

Angermeier, Rob Slotow, 2016-09-20 Reintroduction of Fish and Wildlife Populations provides a practical step by step guide to successfully planning implementing and evaluating the reestablishment of animal populations in former habitats or their introduction in new environments In each chapter experts in reintroduction biology outline a comprehensive synthesis of core concepts issues techniques and perspectives This manual and reference supports scientists and managers from fisheries and wildlife professions as they plan reintroductions initiate releases of individuals and manage restored populations over time Covering a broad range of taxonomic groups ecosystems and global regions this edited volume is an essential guide for academics students and professionals in natural resource management Routledge Handbook of Forest Ecology Kelvin

S.-H. Peh, Richard T. Corlett, Yves Bergeron, 2024-10-07 The Routledge Handbook of Forest Ecology is an essential resource covering all aspects of forest ecology from a global perspective This new edition has been fully revised and updated throughout to reflect the profound and unprecedented changes in both forests and climates since the publication of the first edition in 2015 The handbook reflects key developments in the field of forest dynamics and large scale processes as well as the changes that are now manifesting in different types of forests across the globe as a result of climate change It covers both natural and managed forests from boreal temperate sub tropical and tropical regions of the world In this second edition the breadth of the handbook has been expanded with new chapters on mountain forests monodominance pathogens and invertebrate pests and amphibians and reptiles in forest ecosystems Original author teams are complemented by the addition of new authors to offer fresh perspectives and the second edition places greater emphasis on the applicability of each topic at a global level The handbook is divided into seven parts Part I The forest Part II Forest dynamics Part III Forest flora and fauna Part IV Energy and nutrients Part V Forest conservation and management Part VI Forest and climate change Part VII Human ecology The Routledge Handbook of Forest Ecology is an essential reference text for a wide range of students and scholars of ecology environmental science forestry geography and natural resource management Issues and Concepts in Historical Ecology Carole L. Crumley, Tommy Lennartsson, Anna Westin, 2018 This book presents a practical holistic research framework to help us both understand our past and build an appealing human future Human-Wildlife Interactions

Systems: Reconnecting Mankind to the Biosphere in an Era of Global Change Olivier Barrière, Mohamed Behnassi, Gilbert David, Vincent Douzal, Mireille Fargette, Thérèse Libourel, Maud Loireau, Laurence Pascal, Catherine Prost, Voyner Ravana-Cañete, Frédérique Seyler, Serge Morand, 2019-03-12 This second volume is the work of more than 55 authors from 15 different disciplines and includes complex systems science which studies the viability of components and also the study of empirical situations As readers will discover the coviability of social and ecological systems is based on the contradiction between humanity which adopts finalized objectives and the biosphere which refers to a ecological functions We see how concrete situations shed light on the coviability s determinants and in this book the very nature of the coviability presented as a concept paradigm is defined in a transversal and ontological ways By adopting a systemic approach without advocating any economic dogma such as development or dichotomizing between humans and nature while emphasizing what is relevant to humans and what is not this work neutrally contextualizes man s place in the biosphere It offers a new mode of thinking and positioning of the ecological imperative and will appeal to all those working with social and ecological systems

Rewilding European Landscapes Henrique M. Pereira, Laetitia M. Navarro, 2015-05-04 Some European lands have been progressively alleviated of human pressures particularly traditional agriculture in remote areas This book proposes that this land abandonment can be seen as an opportunity to restore natural ecosystems via rewilding We define rewilding as the passive management of ecological successions having in mind the long term goal of restoring natural ecosystem processes The book aims at introducing the concept of rewilding to scientists students and practitioners The first part presents the theory of rewilding in the European context The second part of the book directly addresses the link between rewilding biodiversity and habitats The third and last part is dedicated to practical aspects of the implementation of rewilding as a land management option We believe that this book will both set the basis for future research on rewilding and help practitioners think about how rewilding can take place in areas under their management *Conservation Education and Outreach*

Techniques Susan K. Jacobson, Mallory McDuff, Martha Monroe, 2015-09-03 The conservation of biological diversity depends on people s knowledge and actions This book presents the theory and practice for creating effective education and outreach programmes for conservation The authors describe an exciting array of techniques for enhancing school resources marketing environmental messages using social media developing partnerships for conservation and designing on site programmes for parks and community centres Vivid case studies from around the world illustrate techniques and describe planning implementation and evaluation procedures enabling readers to implement their own new ideas effectively *Conservation Education and Outreach Techniques* now in its second edition and updated throughout includes twelve chapters illustrated with numerous photographs showing education and outreach programmes in action each incorporating an extensive

bibliography Helpful text boxes provide practical tips guidelines and recommendations for further exploration of the chapter topics This book will be particularly relevant to conservation scientists resource managers environmental educators students and citizen activists It will also serve as a handy reference and a comprehensive text for a variety of natural resource and environmental professionals **The Routledge Handbook of Landscape Ecology** Robert A. Francis, James D.A.

Millington, George L.W. Perry, Emily S. Minor, 2021-09-08 The Handbook provides a supporting guide to key aspects and applications of landscape ecology to underpin its research and teaching A wide range of contributions written by expert researchers in the field summarize the latest knowledge on landscape ecology theory and concepts landscape processes methods and tools and emerging frontiers Landscape ecology is an interdisciplinary and holistic discipline and this is reflected in the chapters contained in this Handbook Authors from varying disciplinary backgrounds tackle key concepts such as landscape structure and function scale and connectivity landscape processes such as disturbance flows and fragmentation methods such as remote sensing and mapping fieldwork pattern analysis modelling and participation and engagement in landscape planning and emerging frontiers such as ecosystem services landscape approaches to biodiversity conservation and climate change Each chapter provides a blend of the latest scientific understanding of its focal topics along with considerations and examples of their application from around the world An invaluable guide to the concepts methods and applications of landscape ecology this book will be an important reference text for a wide range of students and academics in ecology geography biology and interdisciplinary environmental studies Feathered Entanglements Scott E. Simon, Frédéric Laugrand, 2024-10-15 As they migrated across great distances ancient humans may have used birdsong and bird sightings to find food and water in unseen territory Today attending to birds helps scientists track not only avian migration but also environmental change Birds remain our sentinels Feathered Entanglements offers a rich tapestry of human bird relations across the Indo Pacific In this era of uncontrolled industrialization we have grown increasingly disconnected from the natural world The ways in which birds feature in the daily life symbolic systems and material culture of humans from pigeon keeping on the rooftops of Amman to the rituals of Indigenous peoples in Taiwan can teach us how to live with other species amid the challenges of the Anthropocene In a time of intensifying ecological crisis we need more than ever to protect and appreciate non human lives Feathered Entanglements embraces the connection between humans birds and our shared world **Wild** Solveig Bøe, Hege Charlotte Faber, Eivind Kasa, 2022-10-20 In this interdisciplinary work philosophers from different specialisms connect with the notion of the wild today and interrogate how it is mediated through the culture of the Anthropocene They make use of empirical material like specific artworks films and other cultural works related to the term wild to consider the aesthetic experience of nature focusing on the untamed the boundless the unwieldy or the unpredictable in other words aspects of nature that are mediated by culture This book maps out the wide range of ways in which we experience the wildness of nature aesthetically relating both to immediate experience as well as to experience mediated

through cultural expression A variety of subjects are relevant in this context including aesthetics art history theology human geography film studies and architecture A theme that is pursued throughout the book is the wild in connection with ecology and its experience of nature as both a constructive and destructive force
