

EXAMEN 1º BACHILLERATO CIENCIAS – Funciones (RESUELTO)
Ejercicio 1. (1 pto.)

Dadas las siguientes funciones, expresa sus características más notables y representa gráficamente.

a) $f(x) = -2x - 3$

b) $f(x) = x^2 + 2x - 30$

c) $f(x) = \frac{2}{x}$

a) $f(x) = -2x - 3 \Rightarrow$ polinomio de primer grado

Dar valores a la x para hallar $f(x)$

x	0	-1	-2	-3	-4
$f(x)$	-3	-1	1	3	5

Pendiente: -2 decreciente

Ordenada en el origen: $-3 \Rightarrow (0; -3)$ punto de corte de la recta con el eje de ordenadas.

Recuerda que una función afín es una función polinómica de grado menor o igual a uno y $y = f(x) = mx + n$. Se representa como una recta, donde m es la pendiente, si esta es positiva la recta es creciente, y si es negativa decreciente.

Oral History and Mathematics Education Antonio Vicente Marafioti Garnica, 2019-09-10 This book presents an innovative method to investigate the history of mathematics education using oral narratives to study different aspects related to the teaching and learning of mathematics The application of oral history in mathematics education research was first developed as a method in Brazil in the early 2000s as a result of interdisciplinary dialogues between mathematics educators anthropologists sociologists historians psychologists artists and philosophers Since then this new methodology has attracted the attention of a growing number of researchers This contributed volume is the first book in English to bring together chapters written by different members of the research group who developed the methodology and to present a comprehensive overview of the theoretical and practical aspects of the use of oral narratives in the study of experiences in mathematics classrooms Oral History and Mathematics Education will be a useful tool to researchers and educators looking for new methods to study the dynamics of teaching and learning mathematics in the classroom and to develop innovative mathematics teacher education programs The volume will also be of interest to historians of education since it describes the foundations of both concepts and procedures related to the application of oral history in educational research always giving examples of studies already conducted and whenever possible suggesting possible research exercises

difiere de los tradicionales textos de cálculo *Mathematical Modelling Programs in Latin America* Milton Rosa, Francisco Cordero, Daniel Clark Orey, Pablo Carranza, 2022-07-06 This book is about the unique sophisticated and rigorous study of mathematics in Latin America developed over centuries of cultural exchange between Europe North and South America More specifically the book explores the tradition of mathematical modelling introduced a century ago This modelling was adapted to assist members of distinct communities to draw information about their own realities through the elaboration of representations which generate mathematical knowledge that deals with creativity and invention The book provides empirical evidence that a category of mathematical modelling developed in Latin America assesses the horizontal and reciprocal relations between mathematics school non school contexts and the real world These relations provide an epistemological and ontological change where mathematical knowledge of the others is recognized on a horizontal plane Further they oblige mathematics teachers and students to understand as a community of knowledge that builds their own mathematical categories of their environment governed by the reciprocal relationships between academic knowledge and functional knowledge The dimensions of the relationships make up a frame of reference that guides educational change in mathematics The book presents an inquiry based approach of three Latin American modelling programs ethnomodelling transversality of knowledge and reasoned decision making Each one with its respective theoretical and methodological foundations related to ethnomathematics and mathematical modelling socioepistemology and the attribution of meaning to learning Undoubtedly the three mathematical modelling programs independently provide educational gains each with its levels of specificity and loyal to its philosophical theoretical and methodological principles However the book places them together organized by axes to define a corpus of mathematical knowledge that envisions profound educational change through the development of different approaches of mathematical modelling The authors of the 18 chapters in this book who represent the diversity of Latin America are from eight countries Argentina Brazil Chile Colombia Costa Rica Cuba Ecuador Honduras and Mexico They were invited to share their ideas perspectives and discuss investigations that represent a rich sample of three Latin American perspectives on mathematical modelling **Matemáticas para las ciencias aplicadas**

Topics in Multivariate Approximation C. K. Chui, L. L. Schumaker, F. I. Utreras, 2014-05-10

Topics in Multivariate Approximation contains the proceedings of an international workshop on multivariate approximation held at the University of Chile in Santiago Chile on December 15 19 1986 Leading researchers in the field discussed several problem areas related to multivariate approximation and tackled topics ranging from multivariate splines and fitting of scattered data to tensor approximation methods and multivariate polynomial approximation Numerical grid generation and finite element methods were also explored along with constrained interpolation and smoothing Comprised of 22 chapters this book first describes the application of Boolean methods of approximation in combination with the theory of right invertible operators to bivariate Fourier expansions The reader is then introduced to ill posed problems in multivariate approximation interpolation of scattered data by radial functions and shape preserving surface interpolation Subsequent chapters focus on approximation by harmonic functions numerical generation of nested series of general triangular grids triangulation methods and inequalities arising from best local approximations in rectangles A bibliography of multivariate approximation concludes the book This monograph will be of interest to mathematicians

Singularities, Algebraic Geometry, Commutative Algebra, and Related Topics Gert-Martin Greuel, Luis Narváez Macarro, Sebastià Xambó-Descamps, 2018-09-18

This volume brings together recent original research and survey articles by leading experts in several fields that include singularity theory algebraic geometry and commutative algebra The motivation for this collection comes from the wide ranging research of the distinguished mathematician Antonio Campillo in these and related fields Besides his influence in the mathematical community stemming from his research Campillo has also

endeavored to promote mathematics and mathematicians networking everywhere especially in Spain Latin America and Europe Because of his impressive achievements throughout his career we dedicate this book to Campillo in honor of his 65th birthday Researchers and students from the world wide and in particular Latin American and European communities in singularities algebraic geometry commutative algebra coding theory and other fields covered in the volume will have interest in this book **Pseudocompact Topological Spaces** Michael Hrušák,Ángel Tamariz-Mascarúa,Mikhail

Tkachenko,2018-07-19 This book intended for postgraduate students and researchers presents many results of historical importance on pseudocompact spaces In 1948 E Hewitt introduced the concept of pseudocompactness which generalizes a property of compact subsets of the real line A topological space is pseudocompact if the range of any real valued continuous function defined on the space is a bounded subset of the real line Pseudocompact spaces constitute a natural and fundamental class of objects in General Topology and research into their properties has important repercussions in diverse branches of Mathematics such as Functional Analysis Dynamical Systems Set Theory and Topological Algebraic structures The collection of authors of this volume include pioneers in their fields who have written a comprehensive explanation on this subject In addition the text examines new lines of research that have been at the forefront of mathematics There is as yet no text that systematically compiles and develops the extensive theory of pseudocompact spaces making this book an essential asset for anyone in the field of topology *Revista da Faculdade de Ciencias. 2. ser.
