Fundamentals of Fire Protection for the Safety Professional Don Philpott, 2022-08-31 *Fundamentals of Fire Protection for the Safety Professional* provides safety managers with a guide for incorporating fire hazard awareness and protection into their safety management plans. Industrial fires pose one of the greatest threats to organizations in terms of financial human and property losses. Understanding fire safety basics, the physics of fire and the properties and classes of common hazards is key to designing fire safety management programs that not only protect an organization's assets but also ensure the safe evacuation of all involved. *Fundamentals of Fire Protection for the Safety Professional* takes an in-depth look at fire hazards in the workplace from the substances required to do business to the building construction itself and provides practical fire safety principles that can be applied in any work environment. Readers will learn how to develop emergency action plans and fire prevention plans, implement effective alarm and detection systems and fire extinguishment systems and develop a comprehensive fire program management plan that is in compliance with Federal Emergency Management Agency, Occupational Safety and Health Administration, Environmental Protection Agency and National Fire Protection Association standards. Each chapter includes a chapter summary and sample problems, making this an ideal training tool in the workplace or the classroom. Answers to chapter questions and a comprehensive glossary and index are provided at the end of the book.

A Framework to Guide Selection of Chemical Alternatives National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Board on Chemical Sciences and Technology, Committee on the Design and Evaluation of Safer Chemical Substitutions: A Framework to Inform Government and Industry Decisions, 2014-10-29 Historically regulations governing chemical use have often focused on widely used chemicals and acute human health effects of exposure to them as well as their potential to cause cancer and other adverse health effects As scientific knowledge has expanded there has been an increased awareness of the mechanisms through which chemicals may exert harmful effects on human health as well as their effects on other species and ecosystems Identification of high priority chemicals and other chemicals of concern has prompted a growing number of state and local governments as well as major companies to take steps beyond existing hazardous chemical federal legislation Interest in approaches and policies that ensure that any new substances substituted for chemicals of concern are assessed as carefully and thoroughly as possible has also burgeoned The overarching goal of these approaches is to avoid regrettable substitutions which occur when a toxic chemical is replaced by another chemical that later proved unsuitable because of persistence bioaccumulation toxicity or other concerns Chemical alternative assessments are tools designed to facilitate consideration of these factors to assist stakeholders in identifying chemicals that may have the greatest likelihood of harm to human and ecological health and to provide guidance on how the industry may develop and adopt safer alternatives A Framework to Guide Selection of Chemical Alternatives develops and demonstrates a decision framework for evaluating potentially safer substitute chemicals as primarily determined by human health and ecological risks This new framework is informed by previous efforts by regulatory agencies academic institutions and others to develop alternative assessment frameworks that could be operationalized In addition to hazard assessments the framework incorporates steps for life cycle thinking which considers possible impacts of a chemical at all stages including production use and disposal as well as steps for performance and economic assessments The report also highlights how modern information sources such as computational modeling can supplement traditional toxicology data in the assessment

process This new framework allows the evaluation of the full range of benefits and shortcomings of substitutes and examination of tradeoffs between these risks and factors such as product functionality product efficacy process safety and resource use Through case studies this report demonstrates how different users in contrasting decision contexts with diverse priorities can apply the framework This report will be an essential resource to the chemical industry environmentalists ecologists and state and local governments
