of dynamic neural network technologies primarily related to aircraft Provides an overview of recent achievements and future needs in this area **Novel decision-making method based on bipolar neutrosophic information** Jianming

Zhan,Muhammad Akram,Muzzamal Sitara, In 1998 Smarandache originally considered the concept of neutrosophic set from philosophical point of view The notion of a single valued neutrosophic set is a subclass of the neutrosophic set from a scientific and engineering point of view and an extension of intuitionistic fuzzy sets A bipolar single valued neutrosophic set is an extension of a bipolar fuzzy set which provides us an additional possibility to represent uncertainty imprecise incomplete and inconsistent information existing in real situations In this research article we apply the concept of bipolar single valued neutrosophic sets to graph structures and present a novel framework for handling bipolar neutrosophic information by combining bipolar neutrosophic sets with graph structures Several basic notions concerning bipolar single valued neutrosophic graph structures are introduced and some related properties are investigated We also consider the applications of bipolar single valued neutrosophic graph structures in decision making In particular efficient algorithms are developed to solve decision making problems regarding recognition of each country s participation in its conspicuous relationships detection of psychological improvement of patients in a mental hospital and uncovering the undercover reasons for global terrorism **Subject Guide to Books in Print** ,1997 **Hokkaido Mathematical Journal** ,2007
