**The Teaching and Learning of Mathematics at University Level** Derek Holton, 2006-04-11 This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level As such it is one of a number of such studies that ICMI has commissioned The other Study Volumes cover assessment in mathematics education gender equity research in mathematics education the teaching of geometry and history in mathematics education All of these Study Volumes represent a statement of the state of the art in their respective areas We hope that this is also the case for the current Study Volume The current study on university level mathematics was commissioned for essentially four reasons First universities world wide are accepting a much larger and more diverse group of students than has been the case Consequently universities have begun to adopt a role more like that of the school system and less like the elite institutions of the past As a result the educational and pedagogical issues facing universities have changed Second although university student numbers have increased significantly there has not been a corresponding increase in the number of mathematics majors Hence mathematics departments have to be more aware of their students needs in order to retain the students they have and to attract future students As part of this awareness departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past Using the Mathematics Literature Kristine K. Fowler, 2004-05-25 This reference serves as a reader friendly guide to every basic tool and skill required in the mathematical library and helps mathematicians find resources in any format in the mathematics literature It lists a wide range of standard texts journals review articles newsgroups and Internet and database tools for every major subfield in mathematics and details methods of access to primary literature sources of new research applications results and techniques Using the Mathematics Literature is the most comprehensive and up to date resource on mathematics literature in both print and electronic formats presenting time saving strategies for retrieval of the latest information Research Directions in Distributed Parameter Systems Ralph C. **Data in the Information Society** György Surján, Rolf Engelbrecht, Peter McNair, 2002 MIE 2002 is the XVIIth international conference of the European Federation of Medical Informatics Today mankind builds up the information society enabled by the underlying rapid development in computer technology The significance of the spread of the internet is comparable to the significance of Gutenberg's invention On one hand it both helps dissemination of data and knowledge and sharing of ideas On the other hand the achievements may divide the society as did non literacy deprive many people from knowledge throughout centuries Today millions of people are isolated from an incredibly large amount of information because of computer non literacy and a new elite mastering the information society has appeared However the ease of production and dissemination of information may foster thoughtless communication and has led to a flood of information and disinformation We have to learn how to behave in this new situation in which the dissemination of information at an international level is totally uncontrolled In the area of medical or health informatics these questions are more serious Lack of information false or inadequate information as well as improper interpretation of accurate information may seriously harm patients And the process may go out of control of the physician i.e. patients can treat themselves just by visiting some health sites on the net Everybody may throw a message in a bottle in information flood and everybody may pick up messages at any time Can we do anything to ensure that all messages are valid Can we guarantee that our messages reach the intended audience Can we secure that content has not changed on its way Do we know that people getting our messages will interpret them correctly Are we able to understand the intention of a sender when we get a message totally out of context These questions build up the framework of MIE2002
