that living beings are merely sophisticated structures of lifeless molecules If this view is correct where do the seemingly purposeful motions of cells and organisms originate In *Life's Ratchet* physicist Peter M Hoffmann locates the answer to this age old question at the nanoscale Below the calm ordered exterior of a living organism lies microscopic chaos or what Hoffmann calls the molecular storm specialized molecules immersed in a whirlwind of colliding water molecules Our cells are filled with molecular machines which like tiny ratchets transform random motion into ordered activity and create the purpose that is the hallmark of life Tiny electrical motors turn electrical voltage into motion nanoscale factories custom build other molecular machines and mechanical machines twist untwist separate and package strands of DNA The cell is like a city an unfathomable complex collection of molecular workers working together to create something greater than themselves Life Hoffman argues emerges from the random motions of atoms filtered through these sophisticated structures of our evolved machinery We are agglomerations of interacting nanoscale machines more amazing than anything in science fiction Rather than relying on some mysterious life force to drive them as people believed for centuries life's ratchets harness instead the second law of thermodynamics and the disorder of the molecular storm Grounded in Hoffmann's own cutting edge research *Life's Ratchet* reveals the incredible findings of modern nanotechnology to tell the story of how the noisy world of atoms gives rise to life itself
