Gaither's Dictionary of Scientific Quotations Carl C. Gaither, Alma E. Cavazos-Gaither, 2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics     *Computer Aided Systems Theory - EUROCAST 2017* Roberto Moreno-Díaz, Franz Pichler, Alexis Quesada-Arencibia, 2018-01-25 The two volume set LNCS 10671 and 10672 constitutes the thoroughly refereed proceedings of the 16th International Conference on Computer Aided Systems Theory EUROCAST 2017 held in Las Palmas de Gran Canaria Spain in February 2017 The 117 full papers presented were carefully reviewed and selected from 160 submissions The papers are organized in topical sections on pioneers and landmarks in the development of information and communication technologies systems theory socio economic systems and applications theory and applications of metaheuristic algorithms stochastic models and applications to natural social and technical systems model based system design verification and simulation applications of signal processing technology algebraic and combinatorial methods in signal and pattern analysis computer vision deep learning and applications computer and systems based methods and electronics technologies in medicine intelligent transportation systems and smart mobility     Electric Waves Heinrich Hertz, 1893     Quest For A Unified Theory Wolfgang Hofkirchner, 2013-10-15 First published in 1999 Volume 13 in the 13 volume set titled World Futures General Evolution Studies with a common focus of the emerging field of general evolutionary theory This volume will expand across disciplines where scholars from new fields will contribute books that propose general evolution theory in novel contexts The essays are structured with five topics Approaches to Unification Concepts of Information Self Organizing Systems Life and Consciousness Society and Technology     *Outsider Scientists* Oren Harman, Michael R. Dietrich, 2013-12-11 Outsider Scientists describes the transformative role played by outsiders in the growth of the modern life sciences Biology which occupies a special place between the exact and human sciences has historically attracted many thinkers whose primary training was in other fields mathematics physics chemistry linguistics philosophy history anthropology engineering and even literature These outsiders brought with them ideas and tools that were foreign to biology but which when applied to biological problems helped to bring about dramatic and often surprising breakthroughs This volume brings together eighteen thought provoking biographical essays of some of the most remarkable outsiders of the modern era each written by an authority in the respective field From Noam Chomsky using linguistics to answer questions about brain architecture to Erwin Schrödinger contemplating DNA as a physicist would to Drew Endy tinkering with Biobricks to create new forms of synthetic

life the outsiders featured here make clear just how much there is to gain from disrespecting conventional boundaries. Innovation it turns out often relies on importing new ideas from other fields. Without its outsiders modern biology would hardly be recognizable. *Intellectual Pursuits of Nicolas Rashevsky* Maya M. Shmailov, 2016-08-29 Who was Nicolas Rashevsky? To answer that question this book draws on Rashevsky's unexplored personal archival papers and shares interviews with his family, students and friends as well as discussions with biologists and mathematical biologists to flesh out and complete the picture. Most modern day biologists have never heard of Rashevsky. Why? In what constitutes the first detailed biography of theoretical physicist Nicolas Rashevsky 1899-1972 spanning key aspects of his long scientific career the book captures Rashevsky's ways of thinking about the place mathematical biology should have in biology and his personal struggle for the acceptance of his views. It brings to light the tension between mathematicians, theoretical physicists and biologists when it comes to the introduction of physico-mathematical tools into biology. Rashevsky's successes and failures in his efforts to establish mathematical biology as a subfield of biology provide an important test case for understanding the role of theory in particular mathematics in understanding the natural world. With the biological sciences moving towards new vistas of inter and multi-disciplinary collaborations and research programs the book will appeal to a wide readership ranging from historians, sociologists and ethnographers of American science and culture to students and general readers with an interest in the history of the life sciences, mathematical biology and the social construction of science. **Mathematical Modelling of Biosystems** Rubem P. Mondaini, Panos M. Pardalos, 2008-02-23 This volume is an interdisciplinary book which introduces in a very readable way state-of-the-art research in the fundamental topics of mathematical modelling of Biosystems. In short the book offers an overview of mathematical and computational modelling of biosystems including biological phenomena in general. There is also a special introduction to Protein Physics which aims to explain the all-or-none first order phase transitions from native to denatured states. **NASA Technical Note**, 1963 *The Transport of Chemically Reacting Species in the Classical Capillary* John T. Howe, 1963 [Algebraic and Symbolic Computation Methods in Dynamical Systems](#) Alban Quadrat, Eva Zerz, 2020-05-30 This book aims at reviewing recent progress in the direction of algebraic and symbolic computation methods for functional systems e.g. ODE systems, differential time delay equations, difference equations and integro-differential equations. In the nineties modern algebraic theories were introduced in mathematical systems theory and in control theory. Combined with real algebraic geometry which was previously introduced in control theory the past years have seen a flourishing development of algebraic methods in control theory. One of the strengths of algebraic methods lies in their close connections to computations. The use of the above mentioned algebraic theories in control theory has been an important source of motivation to develop effective versions of these theories when possible. With the development of computer algebra and computer algebra systems symbolic methods for control theory have been developed over the past years. The goal of this book is to propose a partial state of the art in this direction. To make

recent results more easily accessible to a large audience the chapters include materials which survey the main mathematical methods and results and which are illustrated with explicit examples The Australian Journal of Science ,1960 **Applied Mechanics Reviews** ,1968 **Albright's Chemical Engineering Handbook** Lyle Albright,2008-11-20 Taking greater advantage of powerful computing capabilities over the last several years the development of fundamental information and new models has led to major advances in nearly every aspect of chemical engineering Albright s Chemical Engineering Handbook represents a reliable source of updated methods applications and fundamental concepts that will continue to play a significant role in driving new research and improving plant design and operations Well rounded concise and practical by design this handbook collects valuable insight from an exceptional diversity of leaders in their respective specialties Each chapter provides a clear review of basic information case examples and references to additional more in depth information They explain essential principles calculations and issues relating to topics including reaction engineering process control and design waste disposal and electrochemical and biochemical engineering The final chapters cover aspects of patents and intellectual property practical communication and ethical considerations that are most relevant to engineers From fundamentals to plant operations Albright s Chemical Engineering Handbook offers a thorough yet succinct guide to day to day methods and calculations used in chemical engineering applications This handbook will serve the needs of practicing professionals as well as students preparing to enter the field *The Computational Theory of Mind* Matteo Colombo,Gualtiero Piccinini,2023-11-29 The Computational Theory of Mind says that the mind is a computing system It has a long history going back to the idea that thought is a kind of computation Its modern incarnation relies on analogies with contemporary computing technology and the use of computational models It comes in many versions some more plausible than others This Element supports the theory primarily by its contribution to solving the mind body problem its ability to explain mental phenomena and the success of computational modelling and artificial intelligence To be turned into an adequate theory it needs to be made compatible with the tractability of cognition the situatedness and dynamical aspects of the mind the way the brain works intentionality and consciousness Journal National Cancer Institute (U.S.),1964 Journal of the National Cancer Institute ,1964 **Mathematical biophysics** Nicolas Rashevsky,1960 Engineering Principles in Physiology J.
