**Magician of Sound** Jessie Fillerup, 2021-04-20 French composer Maurice Ravel was described by critics as a magician conjurer and illusionist Scholars have been aware of this historical curiosity but none so far have explained

why Ravel attracted such critiques or what they might tell us about how to interpret his music *Magician of Sound* examines Ravel's music through the lens of illusory experience considering how timbre, orchestral effects, figure-ground relationships and impressions of motion and stasis might be experienced as if they were conjuring tricks. Applying concepts from music theory, psychology, philosophy and the history of magic, Jessie Fillerup develops an approach to musical illusion that newly illuminates Ravel's fascination with machines and creates compelling links between his music and other forms of aesthetic illusion from painting and poetry to fiction and phantasmagoria. Fillerup analyzes scenes of enchantment and illusory effects in Ravel's most popular works including *Bolero*, *La Valse*, *Daphnis et Chloé* and *Rapsodie espagnole*, relating his methods and musical effects to the practice of theatrical conjurers. Drawing on a rich well of primary sources, *Magician of Sound* provides a new interdisciplinary framework for interpreting this enigmatic composer, linking magic and music. *Expanding the Horizon of Electroacoustic Music Analysis* Simon Emmerson, Leigh Landy, 2016-04-07 Innovations in music technology bring with them a new set of challenges for describing and understanding the electroacoustic repertoire. This edited collection presents a state-of-the-art overview of analysis methods for electroacoustic music in this rapidly developing field. The first part of the book explains the needs of differing electroacoustic genres and puts forward a template for the analysis of electroacoustic music. Part II discusses the latest ideas in the field and the challenges associated with new technologies, while Part III explores how analyses have harnessed the new forces of multimedia and includes an introduction to new software, *EAnalysis*, which was created by the editors as the result of an Arts and Humanities Research Council grant. The final part of the book demonstrates these new methods in action with analyses of key electroacoustic works from a wide range of genres and sources. **The Routledge Companion to Embodied Music Interaction** Micheline Lesaffre, Pieter-Jan Maes, Marc Leman, 2017-09-19 The *Routledge Companion to Embodied Music Interaction* captures a new paradigm in the study of music interaction as a wave of recent research focuses on the role of the human body in musical experiences. This volume brings together a broad collection of work that explores all aspects of this new approach to understanding how we interact with music, addressing the issues that have roused the curiosities of scientists for ages to understand the complex and multi-faceted way in which music manifests itself not just as sound but also as a variety of cultural styles not just as experience but also as awareness of that experience. With contributions from an interdisciplinary and international array of scholars including both empirical and theoretical perspectives, the *Companion* explores an equally impressive array of topics including dynamical music interaction theories and concepts, expressive gestural interaction, social music interaction, sociological and anthropological approaches, empowering health and well-being, modeling music interaction, music-based interaction technologies and applications. This book is a vital resource for anyone seeking to understand human interaction with music from an embodied perspective. *The Geometry of Musical Rhythm* Godfried T. topics like counterpoint harmony and algorithmic composition It highlights how the physics of sound waves insights from computer science and cognitive psychology enrich our understanding of music By balancing technical precision with accessible explanations and visual aids Music Math welcomes musicians scientists and anyone curious about the intersection of these seemingly disparate fields      *International Directory of Music and Music Education Institutions, 1996* Callaway International Resource Centre for Music Education, International Society for Music Education, 1996      **Structuring Music through Markup Language: Designs and Architectures** Steyn, Jacques, 2012-11-30 This book offers a different approach to music by focusing on the information organization and the development of XML based language presenting a new set of tools for practical implementations and a new investigation into the theory of music Provided by publisher      Advances in Artificial Life , 2001
