The Economics of Law, Order, and Action Jakub Bozydar

Wisniewski, 2018-02-01 According to the standard position of the economic mainstream, the efficient production of so-called public goods, including law and defense, requires the use of territorial monopolies of coercive force. Two arguments are put forward for this position: a positive one based on the claim that only such institutions can successfully supply society with crucial public goods, and a negative one based on the claim that such institutions by themselves constitute inevitable public bads. This book challenges this assumption by utilizing the insights of the Austrian School of Economics, New Institutionalism, constitutional political economy, and other heterodox economic approaches, combined with economically informed ethical analysis. It puts forward a positive case for voluntary social organization that offers new insights into the intersection of economic logic, social philosophy, institutional analysis, and the theory of entrepreneurship. In other words, in an attempt to draw on the interdisciplinary spirit of classical political economy, this book aims at providing a comprehensive economic and ethical case for extending the applicability of voluntary entrepreneurial cooperation to the realm of creating and sustaining legal and protective services together with attendant institutional frameworks.

Labor Economics Pierre Cahuc, André Zylberberg, 2004 A comprehensive graduate level text and professional reference covering all aspects of labor economics.

Economic and Business Analysis Frank S. T. Hsiao, 2011 As we enter the 21st century, most students are familiar with microcomputers. They are adept in visually oriented playing and learning, as evidenced by prevalent video games, music videos, and DVD movies. This book appeals to the modern-day undergraduate and graduate students by using microcomputers through innovative uses of spreadsheets and built-in spreadsheet equations and formulae. This microcomputer skill-intensive book covers major topics in both economic analysis and business analysis. Students will learn how to build complex spreadsheet layouts and perform high-level calculations and analysis intuitively in a non-threatening environment. To encourage students' active learning and critical thinking, they will be given hands-on practice by creating tables and graphs presented in the text and homework, and by changing the parameters to find the effects of the change instantly. At the same time, by acquainting themselves with the popular spreadsheet program, they will acquire more advanced job skills directly.
