**Mathematical Discovery** Brian Thomson, Judith Bruckner, Andrew Bruckner, 2011-04-28 This book is an outgrowth of classes given at the University of California Santa Barbara, mainly for students who had little mathematical background. Many of the students indicated they never understood what mathematics was all about beyond what they learned in algebra and geometry. Was there any more mathematics to be discovered or created? How could one actually discover or create new mathematics? In order to give these students some sort of answers to such questions, we designed a course in which the students could actually participate in the discovery of mathematics. **Mathematical Mysteries** Calvin C.

Clawson, 2013-11-09 A meditation on the beauty and meaning of numbers, exploring mathematical equations describing some of the mathematical discoveries of the past millennia and pondering philosophical questions about the relation of numbers to the universe. Thinking Matters: Critical Thinking As Creative Problem Solving Gary R. Mar, 2021-08-10 The ancient Roman orator Horace (65 B.C. - 8 B.C.) wrote: "Control your mind, or it will control you." In today's society, we are faced with more

information and more complex information than ever. Faced with making decisions, we can feel overwhelmed and helpless. One way to become less helpless is to gain control over our lives by gaining control over our own thinking. We can feel helpless when faced with this barrage of information, opinions, data, and conflicting arguments if we lack the skills to quickly grasp and critically evaluate them. This book is designed to impart these kinds of skills. Any course in a university should do more than teach information; in nearly every field, facts become obsolete quickly. The goals of *Thinking Matters* are to help you. The text is punctuated with exercises or personal experiments to challenge and stimulate your curiosity. These exercises may take the form of an inventory to be taken, a puzzle to be solved, or some thoughts to ponder. The first module, *Thinking Matters: Critical Thinking as Creative Problem Solving*, introduces the student to all the above topics: logic, probability, argument forms, and fallacies, ethical reasoning, algorithms, and computational thinking through logic puzzles and games and mathematical magic tricks.
