A Guide to Econometrics Peter Kennedy, 2003 A popular intuitively based overview of econometrics *Dynamic Econometrics For Empirical Macroeconomic Modelling* Ragnar Nymoen, 2019-07-09 For Masters and PhD students in Economics In this textbook the duality between the equilibrium concept used in dynamic economic theory and the stationarity of economic variables is explained and used in the presentation of single equations models and system of equations such as VARs recursive models and simultaneous equations models The book also contains chapters on exogeneity in the context of estimation policy analysis and forecasting automatic computer based variable selection and how it can aid in the specification of an empirical macroeconomic model and finally on a common framework for model based economic forecasting Supplementary materials and notes are available on the publisher's website Econometrics Badi H. Baltagi, 2013-11-11

This book is intended for a first year graduate course in econometrics However the first six chapters have no matrix algebra and can be used in an advanced undergraduate class This can be supplemented by some of the material in later chapters that do not require matrix algebra like the first part of Chapter 11 on simultaneous equations and Chapter 14 on time series analysis This book teaches some of the basic econometric methods and the underlying assumptions behind them Estimation hypotheses testing and prediction are three recurrent themes in this book Some uses of econometric methods include i empirical testing of economic theory whether it is the permanent income consumption theory or purchasing power parity ii forecasting whether it is GNP or unemployment in the U S economy or future sales in the computer industry iii Estimation of price elasticities of demand or returns to scale in production More importantly econometric methods can be used to simulate the effect of policy changes like a tax increase on gasoline consumption or a ban on advertising on cigarette consumption

Success in Agricultural Transformation Isabelle Tsakok, 2011-08-01 To lift and keep millions out of poverty requires that smallholder agriculture be productive and profitable in the developing world Do we know how to make this happen Researchers and practitioners still debate how best to do so The prevailing methodology which claims causality from measures of statistical significance is inductive and yields contradictory results In this book instead of correlations Isabelle Tsakok looks for patterns common to cases of successful agricultural transformation and then tests them against other cases She proposes a hypothesis that five sets of conditions are necessary to achieve success She concludes that government investment in and delivery of public goods and services sustained over decades is essential to maintaining these conditions and thus successfully transform poverty ridden agricultures No amount of foreign aid can substitute for such sustained government commitment The single most important threat to such government commitment is subservience to the rich and powerful minority
