environmentally and in terms of social equity Flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding but also the consequences This is essential as increases in the probability of inundation are inevitable in many areas of the world due to climate change while socio economic development will lead to spiralling increases in the consequences of flooding unless land use in floodplains is carefully planned Flood Risk Science and Management provides an extensive and comprehensive synthesis of current research in flood management providing a multi disciplinary reference text covering a wide range of flood management topics Its targeted readership is the international research community from research students through to senior staff and flood management professionals such as engineers planners government officials and those with flood management responsibility in the public sector By using the concept of case study chapters international coverage is given to the topic ensuring a world wide relevance

Adhesion in Layered Cement Composites Łukasz Sadowski,2018-12-12 This book discusses how to identify the level of adhesion in layered systems made of cement composites using a multi scale approach based on experimental and numerical analyses In particular it explains 1 The suitability of previously used artificial intelligence tools and learning algorithms for reliable assessment of the level of adhesion of layered systems made of cement composites based on non destructive tests 2 The development of the methodology for a reliable non destructive evaluation of the level of adhesion in newly constructed layered systems of any overlay thickness and in existing layered systems made of cement composites 3 How to determine whether to assess the level of adhesion of the layered systems and discusses the amplitude parameters spatial hybrid and volume parameters describing the morphology of the concrete substrate surface in the mesoscale 4 How to ascertain whether the effective surface area of the existing concrete substrate and the contribution of the exposed aggregate on this substrate determined in mesoscale have an impact on the level of adhesion of layered systems made of cement composites 5 The assessment of the structure of air pores in the microscale and the chemical composition of the cement composite on the nanoscale in the interphase zone together with the determination of their impact on the level of adhesion of layered systems made of cement composites 6 The development of an effective methodology for testing the level of adhesion of layered systems made of cement composites in a multi scale approach including the research methods and descriptors used
