balanced by the very considerable difficulties seen in reaching the required levels of reproducibility and cost. Indications of the significant progress which can be seen in the papers presented in this volume coupled with the recognition that considerable problems still lie between the state of the art and the full and confident exploitation of the many merits of ceramics provide a healthy basis for the profitable selection of future research directions. The mastery of ceramic processing and the imaginative matching of the properties of these materials to diverse applications remain among the most promising sectors for technological development.

Active Materials Peter Fratzl, Michael Friedman, Karin Krauthausen, Wolfgang Schäffner, 2021-12-20

What are active materials? This book aims to introduce and redefine conceptions of matter by considering materials as entities that sense and respond to their environment. By examining the modeling of the experiments on and the construction of these materials and by developing a theory of their structure, their collective activity and their functionality, this volume identifies and develops a novel scientific approach to active materials. Moreover, essays on the history and philosophy of metallurgy, chemistry, biology, and materials science provide these various approaches to active materials with a historical and cultural context. The interviews with experts from the natural sciences included in this volume develop new understandings of active matter and active materials in relation to a range of research objects and from the perspective of different scientific disciplines including biology, physics, chemistry, and materials science. These insights are complemented by contributions on the activity of matter and materials from the humanities and the design field. Discusses the mechanisms of active materials and their various conceptualizations in materials science. Redefines conceptions of active materials through interviews with experts from the natural sciences. Contextualizes, historicizes, and reflects on different notions of matter, materials, and activity through contributions from the humanities. A highly interdisciplinary approach to a cutting edge research topic with contributions from both the sciences and the humanities.

Parallel Minds Laura Tripaldi, 2022-05-31 Insights into the intelligence throughout the natural and technical environment in the fabric of our devices and dwellings in our clothes and under our skin. Is there a way to understand the materials that surround us not as passive objects but as other intelligences interacting with our own? In *Parallel Minds*, expert in materials science and nanotechnology Laura Tripaldi delivers not only detailed insights into the properties and emergent behaviors of matter as revealed by state-of-the-art chemistry, synthetic biology and nanotech, but also a rich philosophical reflection that crosses the frontier between nature and culture where the most cutting edge scientific syntheses resonate with ancient myth. The result is a technomaterial bestiary full of unexpected encounters with strange minds from cobwebs to kevlar and carbon fibre from centaurs to amoebas to arachnids from polycephalic slime to resonating plasmons from viruses to golems. *Parallel Minds* reveals the intelligence at large throughout the natural and technical environment in the fabric of our devices and dwellings in our clothes and even under our skin. Full of lateral ideas and unexpected images, Tripaldi's book imbues the study and synthesis of materials with a new urgency.
