Nurses and other allied health professionals must understand medications and their administration to patients. Although the doctor and pharmacist play key roles, the nurse or other professional gives the meds to the patient and **MUST** be accurate in dosage.

Orders for medications might look like this!

*3mg/kg/min*

*2 drops in each eye bid*

*150 mg tablet qd*

**60-120mcg/kg/hour**

*3 cap. qid*

*30mcg/kg/min*

How will you translate these orders into the actions of administering the appropriate medication?

First, you do the math!

There are two math formulas commonly used in nursing math calculations:

- Ratio and Proportion on p. 4
- IV Flow Rate on p. 6-8
