and scientific discoveries have been made during times of duress or confinement. Unlike most any other subject mathematics may be researched from anywhere. Covid 19 like Cholera implementation of vaccinations have been uneven throughout the globe since the beginning of 2021. However there has been a renewed hope for a return to normalcy though the timing will no doubt vary worldwide. Essays in this volume vary in topic and are written by members of the greater mathematics community hence the use of Math in the book title. They recount or describe significant or noteworthy discoveries, musings, award winnings, eureka moments, challenges, solutions, inspirations, etc. that have resulted from or have occurred during an unprecedented global pandemic. Several of the authors have been involved in starting new research and devising new methodologies related to society's response to the outbreak and its ability to self organize during a dramatic and complex situation. Some contributions describe how mathematical models and the management of big data have proved to be fundamental tools for the interpretation of epidemic activity and development of coping mechanisms.
