Mathematical Modelling In Animal Nutrition:

Mathematical Modelling in Animal Nutrition J. France, E. Kebreab, 2008 The primary purpose of each of the subsequent chapters of this book is to promulgate quantitative approaches concerned with elucidating mechanisms in a particular area of the nutrition of ruminants pigs poultry fish or pets Given the diverse scientific backgrounds of the contributors of each chapter the chapters in the book are arranged according to subject area the imposition of a rigid format for presenting mathematical material has been eschewed though basic mathematical conventions are adhered to

Mathematical Modelling in Animal Nutrition J. France, E. Kebreab, 2008-01-01 Mathematical modelling is increasingly applicable to the practical sciences Here mathematical approaches are applied to the study of mechanisms of digestion and metabolism in primary animal species It also explores common themes between species and provides an integrated approach to mathematical modelling in animal nutrition *Modelling Nutrient Digestion and Utilisation in Farm Animals* D. Sauvant, J. van Milgen, P. Faverdin, N. Friggens, 2011-05-02 For more than 30 years modelling has been an important method for integrating in a flexible comprehensive and widely applicable way basic knowledge and biological concepts on digestion and metabolism in farm animals The purpose of this book is to present the state of art in this area The chapters are written by leading teams and researchers in this field of study mainly from Europe North America and Australasia Considerable progress has been made in topics dealing with modelling methods feeding behaviour digestion and metabolic processes in ruminants and monogastric animals This progress is clearly illustrated by the emergence of a new paradigm in animal nutrition which has moved from the aim to cover the requirements of the animal to explaining and predicting the responses of the animals to diets e g productivity and efficiency impact on quality of products environmental aspects health and well being In this book several chapters illustrate that through empirical models meta analysis is an efficient tool to synthesize information gathered over recent decades In addition compared with other books on modelling farm animal nutrition two new aspects received particular attention expanding knowledge of the individual animal to understanding the functioning and management of herds and the consideration of the environmental impact of animal production This book is a valuable source of information for researchers nutritionists advisors and graduate students who want to have up to date and concise information on mathematical modelling applied to farm animals *Nutritional Modelling for Pigs and Poultry* Nilva K Sakmoura, Rob Gous, Lias Kyriazakis, L Hauschild, 2014-12-15 Modelling is a useful tool for decision making in complex agro industrial scenarios Containing a selection of the papers presented at the International Symposium of Modelling in Pig and Poultry Production 2013 this book brings together the best and most recent academic work on modelling in the pig and poultry industry with a particular emphasis on nutrition It reviews basic modelling concepts descriptions and applications of production models and new methods and approaches in modelling *Mechanistic Modelling in Pig and Poultry Production* R. Gous, C. Fisher, Trevor Raymond Morris, 2006-01-01 These proceedings contain 15 papers on the recent advances in pig

and poultry mechanistic modelling Notable among the papers is the consideration of new components of the animal production process such as social stressors and disease Understanding of some new systems such as the physiological control of egg production in hens by modelling is the given focus in one paper The topics covered in the other papers include the following introduction to modelling in the animal sciences different approaches to modelling animal systems basic concepts describing animal growth and feed intake modelling populations for purposes of optimization advancements in empirical models for prediction and prescription nutrient flow models energy transactions and energy feed systems evaluation of animal genotypes through model inversion considerations for representing microenvironmental conditions in simulation models for broiler chickens use of physiological models to define environmental control strategies comparison of pig growth models from the genetic point of view model of metabolism in the sow and place of models in the new technologies of production systems

Parks, 2012-12-06 Geoffrey R Dolby PhD One of the principal characteristics of a scientific theory is that it be falsifiable It must contain predictions about the real world which can be put to experimental test Another very important characteristic of a good theory is that it should take full cognisance of the literature of the discipline in which it is embedded and that it should be able to explain at least as well as its competitors those experimental results which workers in the discipline accept

without dispute Readers of John Parks book will be left in no doubt that his theory of the feeding and growth of animals meets both of the above criteria The author s knowledge of the literature of animal science and the seriousness of his attempt to incorporate the results of much previous work into the framework of the present theory result in a rich and imaginative integration of diverse material concerned with the growth and feeding of animals through time a theory which is made more precise through the judicious use of mathematics The presentation is such that the key concepts are introduced gradually and readers not accustomed to a mathematical treatment will find that they can appreciate the ideas without undue trauma The key concepts are clearly illustrated by means of a generous set of figures The crux of the theory comprises three differential Eqs 7 1 7

Dynamics in animal nutrition Jannes Doppenberg, Piet van der Aar, 2023-09-04 Animal nutrition is a fast changing field of expertise Newly developed scientific knowledge is quickly adapted to better understand the integral balance between different organs and the digestive system Society demands that the feed industry responds to consumer issues such as food safety sustainability of animal production animal health and welfare carbon foot printing etc via altering feeding programs The practising nutritionist needs to implement this vast knowledge into practical feed formulations in a cost effective way in order to produce feeds and animal products efficiently This book addresses current topics of interest to researchers and nutritionists in animal research the feed and allied industry This includes immunomodulation gut barrier functions in gut health oxidative stress in weaned piglets glutamine as a functional amino acid energy evaluation of feedstuffs for layers reduction of the risk of Salmonella infections glucogenic nutrients as a predictor of milk production reduction of methanogenesis in ruminants glucose metabolism and insulin resistance in sows and much more This reference book will be of vital interest to all involved in animal nutrition and the animal production industry

Achieving sustainable production of poultry meat Volume 2 Todd Applegate, 2017-07-31 To meet growing demand the FAO has estimated that world poultry production needs to grow by 2 3% per year to 2030 Much of the increase in output already achieved has been as a result of improvements in commercial breeds combined with rearing in more intensive production systems However more intensive systems have increased the risk of transmission of animal diseases and zoonoses Consumer expectations of sensory and nutritional quality have never been higher At the same time consumers are more concerned about the environmental impact of poultry production as well as animal welfare Drawing on an international range of expertise this book reviews research on poultry breeding and nutrition The first part of the book reviews how advances in genetics have impacted developments in breeding Part 2 discusses ways of optimising poultry nutrition to ensure quality and sustainability in poultry meat production Chapters review the use of feedstuffs and ingredients such as amino acids enzymes and probiotics as well as feed formulation and safety Achieving sustainable production of poultry meat Volume 2 Breeding and nutrition will be a standard reference for poultry and food scientists in universities government and other research centres and companies involved in poultry production It is accompanied by two further volumes which review safety quality

and sustainability as well as poultry health and welfare *Ruminant physiology* K. Sejrsen,T. Hvelplund,M.O.
