Mathematical Statistics With Applications In Flood Technology:

Coping with Floods Giuseppe Rossi, Nilgun B. Harmanciogamalu, V. Yevjevich, 2012-12-06 Floods are natural hazards whose effects can deeply affect the economic and environmental equilibria of a region. Quality of life of people living in areas close to rivers depends on both the risk that a flood would occur and the reliability of flood forecast warning and control systems. Tools for forecasting and mitigating floods have been developed through research in the recent past. Two innovations currently influence flood hazard mitigation after many decades of lack of significant progress: they are the development of new technologies for real time flood forecast and warning based on weather radars and satellites and a shift from structural to non structural flood control measures due to increased awareness of the importance of protecting the environment and the adverse impacts of hydraulic works on it. This book is a review of research progress booked in the improvements of forecast capability and the control of floods. Mostly the book presents the results of recent research in hydrology, modern techniques of real time forecast and warning and ways of controlling floods for smaller impacts on the environment. A number of case studies of floods in different geographical areas are also presented. Scientists and specialists working in fields of hydrology, environmental protection and hydraulic engineering will appreciate this book for its theoretical and practical content.

18th IMT-GT International Conference on Mathematics, Statistics and their Applications, 2024-04-30 The 18th ICMSA 2023 emphasized the critical role of statistical science in advancing the Sustainable Development Goals (SDGs). The conference highlighted how data science and statistical methods are essential for solving real world problems and achieving sustainable development. The event aimed to enhance the research output of Universitas Syiah Kuala, foster a collaborative research environment, and facilitate scientific exchange with international scholars. By focusing on statistics, the conference sought to enhance the university's global reputation and contribute to government efforts to address health, environmental, and economic challenges through data-driven insights. ICMSA 2023 set a high standard for subsequent conferences with a commitment to refining its structure and expanding its reach. The statistics-focused sessions attracted a large number of submissions reflecting the dynamic nature of the statistics community. Following a thorough peer review process, 22 papers were selected for inclusion in the Book of Applied Statistics, ensuring that the conference's critical statistical research contributions were effectively captured and shared.
