Teaching and Learning Proof Across the Grades Despina A. Stylianou, Maria L. Blanton, Eric J. Knuth, 2010-09-23. A Co-Publication of Routledge for the National Council of Teachers of Mathematics (NCTM). In recent years, there has been increased interest in the nature and role of proof in mathematics education, with many mathematics educators advocating that proof should be a central part of the mathematics education of students at all grade levels. This important new collection provides that much-needed forum for mathematics educators to articulate a connected K-16 story of proof. Such a story includes understanding how the forms of proof, including the nature of argumentation and justification, as well as what counts as proof, evolve chronologically and cognitively, and how curricula and instruction can support the development of students' understanding of proof. Collectively, these essays inform educators and researchers at different grade levels about the teaching and learning of proof at each level and thus help advance the design of further empirical and theoretical work in this area. By building and extending on existing research and by allowing a variety of voices from the field to be heard, *Teaching and Learning Proof Across the Grades* not only highlights the main ideas that have recently emerged on proof research but also defines an agenda for future study.

Architecture and the Mimetic Self Lucy Huskinson,2018-02-02 Buildings shape our identity and sense of self in profound ways that are not always evident to architects and town planners or even to those who think they are intimately

familiar with the buildings they inhabit Architecture and the Mimetic Self provides a useful theoretical guide to our unconscious behaviour in relation to buildings and explains both how and why we are drawn to specific elements and features of architectural design It reveals how even the most uninspiring of buildings can be modified to meet our unconscious expectations and requirements of them and by the same token it explores the repercussions for our wellbeing when buildings fail to do so Criteria for effective architectural design have for a long time been grounded in utilitarian and aesthetic principles of function efficiency cost and visual impact Although these are important considerations they often fail to meet the fundamental needs of those who inhabit and use buildings Misconceptions are rife not least because our responses to architecture are often difficult to measure and are in large part unconscious By bridging psychoanalytic thought and architectural theory Architecture and the Mimetic Self frees the former from its preoccupations with interpersonal human relations to address the vital relationships that we establish with our nonhuman environments In addition to providing a guide to the unconscious behaviours that are most relevant for evaluating architectural design this book explains how our relationships with the built environment inform a more expansive and useful psychoanalytic theory of human relationship and identity It will appeal to psychoanalysts and analytical psychologists architects and all who are interested in the overlaps of psychology architecture and the built environment
