

Sanford L. Segal:
Mathematicians under the Nazis
 von Volker R. Remmert

Der folgende Beitrag ist ursprünglich in der Rubrik H-German des H-Net (Humanities & Social Sciences OnLine) erschienen.¹ H-German (<http://www.h-net.org/~german>) ist ein von Historikern betriebenes, moderiertes internetbasiertes Diskussionsforum, das sich Forschungsthemen der deutschen Geschichte widmet. Der Abdruck erfolgt mit freundlicher Genehmigung des Autors und der Herausgeber von H-German, Susan Boettcher (Austin), David Imhoof (Susquehanna) und Paul Steege (Villanova). (FR)

The history of mathematics is a discipline that only too rarely steps beyond the shadow of mathematics into the limelight of general history. But it is not a dormant field. The history of mathematics and mathematicians in Nazi Germany, in particular, has been the subject of numerous theoretically and methodologically informed publications in the last fifteen years. In keeping with the trend in the history of the sciences, historians of mathematics, including those dealing with the Nazi period, have been reaching out to their colleagues in general history departments. They have been drawing on general historical research and making their own work more accessible in order to explain the relevance of their findings to those outside the narrow confines of their specialization. Herbert Mehrtens and Reinhardt Siegmund-Schultze, for example, have both dealt with important aspects of this topic.²

Historical research on the Nazi period had been severely hindered by the fact that the papers of the German Mathematical Society (Deutsche Mathematiker-Vereinigung, DMV), particularly the personal papers of its president from 1937–1945, the

Freiburg mathematician Wilhelm Süss, were not accessible to historians. These were, however, made available in the archives of Freiburg University in 1997, and they constitute an important corpus of indispensable sources for further research into hidden aspects of the history of mathematics in the Nazi period. Wilhelm Süss, as he was not shy to say, had the “imperialistic goal to gain for the DMV all and exclusive rights and responsibilities for mathematics” in Nazi Germany. The wealth of documents in his personal papers and the official DMV files, dealing with all aspects of mathematics and mathematicians in the years of his presidency, abundantly reflect this goal.

Thorough historical studies of other disciplines (such as Ute Deichmann’s magisterial work on chemistry and biochemistry) have shown how systematic disciplinary histories can shed significant light on issues that are intensively debated by historians of science. In the context of the Nazi period, these include questions of continuities between 1933 and 1945; the practice and effect of dismissals and emigration; the safeguarding of existing, and the availability of new re-
