South African Schooling: The Enigma of Inequality Nic Spaull, Jonathan D. Jansen, 2019-11-05 This volume brings together many of South Africa's leading scholars of education and covers the full range of South African schooling from financing and policy reform to in depth discussions of literacy numeracy teacher development and curriculum change The book moves beyond a historical analysis and provides an inside view of the questions South African scholars are now grappling with Are there different and preferential equilibria we have not yet thought of or explored and if so what are they In practical terms how does one get to a more equitable distribution of teachers resources and learning outcomes While decidedly local these questions resonate throughout the developing world South Africa today is the most unequal country in the world The richest 10% of South Africans lay claim to 65% of national income and 90% of national wealth This is the largest 90/10 gap in the world and one that is reflected in the schooling system Two decades after apartheid it is still the case that the life chances of most South African children are determined not by their ability or the result of hard work and determination but instead by the colour of their skin the province of their birth and the wealth of their parents Looking back on almost three decades of democracy in South Africa it is this stubbornness of inequality and its patterns of persistence that demands explanation justification and analysis This is a landmark book on basic education in South Africa an essential volume for those interested in learning outcomes and their inequality in South Africa The various chapters present conceptually and empirically sophisticated analyses of learning outcomes across divisions of race class and place The book brings together the wealth of decades of research output from top quality researchers to explore what has improved what has not and why Prof Lant Pritchett Harvard University There is much wisdom in this collection from many of the best education analysts in South Africa No surprise that they conclude that without a large and sustained expansion in well trained teachers early childhood education and adequate school resources South Africa will continue to sacrifice its people's future to maintaining the privileges of the few Prof Martin Carnoy Stanford University Altogether one can derive from this very valuable volume if not an exact blueprint for the future then certainly at least a crucial and evidence based itinerary for the next few steps Dr Luis Crouch RTI

research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research **Annual Report Mpumalanga**

(South Africa). Department of Education,2014 **High-Stakes Testing in Education** Theo Eggen,Gordon

Stobart,2015-10-14 High stakes educational testing is a global phenomenon which is increasing in both scale and importance Assessments are high stakes when there are serious consequences for one or more stakeholders Historically tests have largely been used for selection or for providing a licence to practise making them high stakes for the test takers Testing is now also used for the purposes of improving standards of teaching and learning and of holding schools accountable for their students results These tests then become high stakes for teachers and schools especially when they have to meet externally imposed targets More recent has been the emergence of international comparative testing which has become high stakes for governments and policy makers as their education systems are judged in relation to the performances of other countries In this book we draw on research which examines each of these uses of high stakes testing The articles evaluate the impact of such assessments and explore the issues of value and fairness which they raise To underline the international appeal of high stakes testing the studies are drawn from Australia Africa the Caribbean Europe former Soviet republics and North America Collectively they illustrate the power of high stakes assessment in shaping for better or for worse policy making and schooling This book was originally published as a special issue of Assessment in Education Principles Policy Practice NSC Review Guo jia ke xue wei yuan hui,1986 South Africa Yearbook ,2009 *National Science Council Review* Guo jia ke xue wei yuan hui,1991 *Reforms and Issues in School Mathematics in East Asia* ,2010-01-01 Worldwide efforts to improve students learning of mathematics have turned educational researchers attention to some high achieving education systems especially those in East Asia including Chinese Mainland Hong Kong Japan Singapore South Korea and Taiwan However there is much less sharing and learning of educational policy and practices that goes beyond one or two such high achieving education systems At this time when educational changes and reforms for improving students learning of mathematics are also underway within these high achieving education systems in East Asia it becomes timely and important for the world to learn why and how relevant changes take place across these selected education systems This book has put together a set of papers that individually presents issues on the changing mathematics curriculum and teacher education in the six high achieving education systems in East Asia Collectively the book extends beyond what we can learn about exemplary practices

in individual education systems in East Asia It helps us develop a better understanding of the interplay between various measures for the pursuit of excellence in mathematics curriculum and teacher education on the one hand and the different system contexts on the other The intended readers of the book include education policy makers curriculum developers researchers teachers teacher educators and anyone else interested in school mathematics curriculum and teacher education

Resources in Education ,1999-04 Let's Talk About Varsity ,2009 **Femina** ,2005 The Journal of Nursing Education ,1983 The correlation between music aptitude and mathematical achievements of students. A case study of six individual students from a High School in Johannesburg, South Africa Mario Maxwell Müller,2023-09-11 Doctoral Thesis

Dissertation from the year 2023 in the subject Musicology Miscellaneous grade Distinction University of Venda course PhD in Arts and Social Sciences language English abstract A gap existed in the literature focusing on research overall between music aptitude and mathematical achievement within a South African context The purpose of the study was to investigate the effect of music aptitude on mathematical achievement and to evaluate the most appropriate instruments for measuring musical talents and juxtaposing them with mathematical achievement using Gordon s AMMA tool to establish the connection between musical acumen and mathematical achievement in randomly selected learners This study presented data that is now available for use by other researchers The researcher used exploratory designs to generalise assess and test qualitative exploratory results and to see if they could be generalised to a sample and a population as outlined in this dissertation This research was evaluated in both qualitative and quantitative phases The researcher focussed on how students of different ages gender intelligence levels and musical abilities reacted to the AMMA music aptitude test The researcher was intrigued to see that most of the music students in the secondary school could compose with ease without prior knowledge of composition thus demonstrating an excellent theoretical background which was prevalent in his discussions with colleagues Having studied the previous school curriculum they were exposed to since their childhood in primary school the researcher could not find any relevant material linked to composition form structure or even analysis Conversations with colleagues in the mathematical department revealed that the same students were doing extremely well academically in their mathematical subjects This raised further questions for the researcher was this merely a coincidence or was this increase in academic achievement due to the impact of their music studies Most parents in the community encouraged their children to attend private schools and went out of their way financially to provide for a good education reinforcing good will and intentions to foster a brighter future for these learners For students to achieve excellent results aptitude played a prominent role in their musical development **Annual Report** South Africa. Department of Basic Education,2016 **Assessing Academic Literacy in a Multilingual Society** Albert Weideman,John Read,Theo du Plessis,2020-11-02 South African universities face major challenges in meeting the needs of their students in the area of academic language and literacy The dominant medium of instruction in the universities is English and to a much lesser extent Afrikaans but only a minority of the national

population are native speakers of these languages. Nine other languages can be media of instruction in schools which makes the transition to tertiary education difficult enough in itself for students from these schools. The focus of this book is on procedures for assessing the academic language and literacy levels and needs of students not in order to exclude students from higher education but rather to identify those who would benefit from further development of their ability in order to undertake their degree studies successfully. The volume also aims to bring the innovative solutions designed by South African educators to a wider international audience.
