2012 GCSE English results

Great Britain: Parliament: House of Commons: Education Committee,2013-06-11 The 2012 GCSE English results prompted significant controversy which ultimately resulted in an application for judicial review This report sets out the background to these events and identifies lessons to be learned The problems with GCSE English can be traced back to the 2007 09 development phase of the qualification in particular the turbulence which resulted from the shift away from a mostly linear to a modular system combined with a high proportion of controlled assessment and generous marking tolerances Exam board experts raised concerns at the time but these were not acted upon by the regulator the then interim Ofqual Further difficulties arose because of pressures from the school accountability system The problems experienced with GCSE English in 2012 highlighted serious weaknesses in the moderation of speaking and listening with consequences for grade awarding The current status of Ofqual as an independent regulator accountable to Parliament is the right one However the Coalition Government is bringing in wholesale changes to GCSEs and A levels to a tight timetable and at the same time Ofqual must have systems in place The Committee is also concerned that there is a rush towards separate exam systems for England Wales and Northern Ireland without careful reflection on what might be lost or consensus that this is the right thing to do

Secondary Maths in Action Emma McCrea,2025-07-11 In *Secondary Maths in Action* experienced curriculum expert and maths teacher Emma McCrea offers insights into the complex task of teaching maths Taking an evidence informed stance Emma first explores the age old question of why we study maths and the important role it plays in our lives and in society Next she examines several pertinent debates in maths those of pupil grouping mastery and gender Finally we are taken on a grand tour of curriculum pedagogy and assessment as the fundamental pillars of great teaching Additionally the book includes four rich case studies revisited throughout the curriculum pedagogy and assessment chapters which help to showcase how these ideas can be applied in various contexts so you can really see what it all looks like In Action Math Education for America? Mark Wolfmeyer,2013-12-04 *Math Education for America* analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States The effort to standardize a national mathematics curriculum for public schools in the U S culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics Rather than looking at the text of specific policy documents this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis Breaking new ground in detailing and theorizing the politics of math education Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments human capital education policy debates over traditional and reform pedagogy the assumed content knowledge deficit of math teachers and the proliferation of profit driven educational businesses By establishing the interconnectedness of these interests with the national math education curriculum he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest **Parliamentary Debates (Hansard)**. Pardalos,2013-12-01 There has been much recent progress in global optimization algo rithms for nonconvex continuous and discrete problems from both a theoretical and a practical perspective Convex analysis plays a fun damental role in the analysis and development of global optimization algorithms This is due essentially to the fact that virtually all noncon vex optimization problems can be described using differences of convex functions and differences of convex sets A conference on Convex Analysis and Global Optimization was held during June 5 9 2000 at Pythagorion Samos Greece The conference was honoring the memory of C Caratheodory 1873 1950 and was en dorsed by the Mathematical Programming Society MPS and by the Society for Industrial and Applied Mathematics SIAM Activity Group in Optimization The conference was sponsored by the European Union through the EPEAEK program the Department of Mathematics of the Aegean University and the Center for Applied Optimization of the University of Florida by the General Secretariat of Research and Tech nology of Greece by the Ministry of Education of Greece and several local Greek government agencies and companies This volume contains a selective collection of refereed papers based on invited and contribut ing talks presented at this conference The two themes of convexity and global optimization pervade this book The conference provided a forum for researchers working on different aspects of convexity and global opti mization to present their recent discoveries and to interact with people working on complementary aspects of mathematical programming *The World's Future Crisis: Extractive Resources Depletion* Shahla Seifi,2021-10-01 This book focuses mainly on strategic decision making at a global level which is rarely considered in approaches to sustainability This book makes a unique contribution as the work looks at global consequences of mineral exhaustion and steps that can be taken to alleviate the impending problems This book highlights how sustainability has become one of the most important issues for businesses governments and society at large This book explores the topic of sustainability as one that is under much debate as to what it actually is and how it can be achieved but it is completely evident that the resources of the planet are fixed in quantity and once used cannot be reused except through being reused in

one form or another This is particularly true of the mineral resources of the planet These are finite in quantity and once fully extracted extra quantities are no longer available for future use This book argues and presents evidence that the remaining mineral resources are diminishing significantly and heading towards exhaustion Once mined and consumed they are no longer available for future use other than what can be recycled and reused This book demonstrates that future scarcity means that best use must be made of what exists as sustainability depends upon this and best use is defined as utility rather than economic value which must be considered at a global level rather than a national level Moreover sustainability depends upon both availability in the present and in the future so the use of resources requires attention to the future as well as to the present This book investigates the alternative methods of achieving the global distribution of these mineral resources and proposes an optimum solution This book adds to the discourse through the understanding of the importance of the depletion and finiteness of raw materials and their use for the present and the future in order to achieve and maintain sustainability

Cortada,2023-01-09 For over twenty years James W Cortada has pioneered research into how information shapes society In this book he tells the story of how information evolved since the mid nineteenth century Cortada argues that information increased in quantity became more specialized by discipline e g mathematics science political science and more organized Information increased in volume due to a series of innovations such as the electrification of communications and the development of computers but also due to the organization of facts and knowledge by discipline making it easier to manage and access He looks at what major disciplines have done to shape the nature of modern information devoting chapters to the most obvious ones Cortada argues that understanding how some features of information evolved is useful for those who work in subjects that deal with their very construct and application such as computer scientists and those exploring social media and most recently history The Birth of Modern Facts builds on Cortada s prior books examining how information became a central feature of modern society most notably as a sequel to *All the Facts A History of Information in the United States since 1870* OUP 2016 and *Building Blocks of Society History Information Ecosystems and Infrastructures* R L 2021 Beyond the Skills Gap Matthew T.
