**Education** Erich Christian Wittmann, 2020-12-09 This open access book features a selection of articles written by Erich Ch Wittmann between 1984 to 2019 which shows how the design science conception has been continuously developed over a number of decades The articles not only describe this conception in general terms but also demonstrate various substantial learning environments that serve as typical examples In terms of teacher education the book provides clear information on how to combine well understood mathematics and methods courses to benefit of teachers The role of mathematics in mathematics education is often explicitly and implicitly reduced to the delivery of subject matter that then has to be selected and made palpable for students using methods imported from psychology sociology educational research and related disciplines While these fields have made significant contributions to mathematics education in recent decades it cannot be ignored that mathematics itself if well understood provides essential knowledge for teaching mathematics beyond the pure

delivery of subject matter For this purpose mathematics has to be conceived of as an organism that is deeply rooted in elementary operations of the human mind which can be seamlessly developed to higher and higher levels so that the full richness of problems of various degrees of difficulty and different means of representation problem solving strategies and forms of proof can be used in ways that are appropriate for the respective level This view of mathematics is essential for designing learning environments and curricula for conducting empirical studies on truly mathematical processes and also for implementing the findings of mathematics education in teacher education where it is crucial to take systemic constraints into account

*Math Wars* Carmen Latterell,2004-12-30 This book is written for parents and other interested parties so that they can understand the great debate taking place in many states in this country about how to teach basic math The debate centers around the standards written by the National Council of Teachers of Mathematics NCTM which call for a radically different approach to mathematics education Because the issues are so heated between the NCTM oriented curricula and traditional curricula the curricula that NCTM oriented replaced the term Math Wars was coined to describe them Parents are concerned about their children s math learning Teachers are concerned about math teaching When parents see what children are bringing home under the new curriculum it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school But the problem goes beyond grades K 12 Post secondary mathematics courses are the fear of many students The standards created by the NCTM do not necessarily prepare students for success either on SATs or in college Besides lack of knowledge about mathematics education many parents have an additional problem in that they feel they lack knowledge in

mathematics itself This is very intimidating thus it is difficult for parents to do anything about the confusing state of mathematics education This book provides some answers *Teaching what Matters Most* Richard W.
