New Earth Politics

Simon Nicholson,Sikina Jinnah,2016-03-04 Prominent scholars and practitioners consider the role of global environmental politics in the face of increasing environmental stress Humanity s collective impact on the Earth is vast The rate and scale of human driven environmental destruction is quickly outstripping our political and social capacities for managing it We are in effect creating an Earth 2.0 on which the human signature is everywhere a new earth in desperate need of humane and insightful guidance In this volume prominent scholars and practitioners in the field of global environmental politics consider the ecological and political realities of life on the new earth and probe the field s deepest and most enduring questions at a time of increasing environmental stress Arranged in complementary pairs the essays in this volume include reflections on environmental pedagogy analysis of new geopolitical realities reflections on the power of social movements and international institutions and calls for more compelling narratives to promote environmental action At the heart of the volume is sustained attention to the role of traditional scholarly activities in a world confronting environmental disaster Some contributors make the case that it is the scholar s role to provide activists with the necessary knowledge and tools others argue for more direct

engagement and political action All the contributors confront the overriding question What is the best use of their individual and combined energies given the dire environmental reality Contributors Erik Assadourian Frank Biermann Wil Burns Ken Conca Peter Dauvergne Daniel Deudney Navroz Dubash Richard Falk Joyeeta Gupta Maria Ivanova Peter Jacques Sikina Jinnah Karen T Litfin Michael F Maniates Elizabeth Mendenhall Simon Nicholson Kate O Neill Judith Shapiro Paul Wapner Oran R Young *Global Governance and Public Health* Geoffrey B. Cockerham, 2018-09-13 Global health issues transcend national borders and state sovereignty As a result a collective response at the international level is necessary to effectively address these problems This response however is not simply based on medical expertise or technology but is largely dependent on politics Health has become inextricably linked to policies developed by global governance whether these policies involve the surveillance and the prevention of the spread of infectious disease across borders the distribution and consumption of goods that pose a health risk through international commerce the right to quality health for everyone or the protection of human health from climate change and environmental degradation International relations theories provide a key analytical tool for understanding the dynamics of the political process in global governance in addressing health issues in an increasingly globalized world Each chapter will feature boxes highlighting case studies relevant to the material discussion questions and suggested readings **Beyond the Tragedy in Global Fisheries** D. G. Webster, 2017-09-08 An analysis of how responsive governance has shaped the evolution of global fisheries in cyclical patterns of depletion and rebuilding dubbed the management treadmill The oceans are heavily overfished and the greatest challenges to effective fisheries management are not technical but political and economic In this book D G Webster describes how the political economy of fisheries has evolved and highlights patterns that are linked to sustainable transitions in specific fisheries Grounded in the concept of responsive governance Webster's interdisciplinary analysis goes beyond the conventional view of the tragedy of the commons Using her Action Cycle Structural Context framework she maps long running patterns that cycle between depletion and rebuilding in a process that she terms the management treadmill Webster documents the management treadmill in settings that range from small coastal fishing communities to international fisheries that span entire oceans She identifies the profit disconnect in which economic incentives are out of sync with sustainable use and the power disconnect in which those who experience the costs of overexploitation are politically marginalized She examines how these disconnects shaped the economics of expansion and documents how political systems failed to prevent related cycles of serial resource depletion Webster also traces the increasing use of restrictive management in response to worsening fisheries crises and the emergence of new noncommercial interests that demand greater management but also generate substantial conflict She finds that the management treadmill is speeding up with population growth and economic development and so concludes that sustainable fisheries can only exist within a sustainable global economic system **The Future Can't Wait** Steven Gale, Sarah Jackson, 2013 **Global Political Economy** John Ravenhill, 2014 Dealing with the

Matthew, 2013 Economic development population growth and poor resource management have combined to alter the planet's natural environment in dramatic and alarming ways For over twenty years considerable research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security At one extreme lie sceptics who contend that the linkages are weak or even non-existent they are simply attempts to harness the resources of the security arena to an environmental agenda At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century indeed the very future of humankind may be at stake This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security It provides a framework for representing and understanding key areas of intellectual convergence and disagreement clarifying achievements of the research as well as identifying its weaknesses and gaps Part I explores the various ways environmental change and security have been linked and provides principal critiques of this linkage Part II explores the linkage through analysis of key issue areas such as climate change energy water food population and development Finally the book concludes with a discussion of the value of this subfield of security studies and with some ideas about the questions it might profitably address in the future This volume is the first to provide a comprehensive overview of the field With contributions from around the world it combines established and emerging scholars to offer a platform for the next wave of research and policy activity It is invaluable for both students and practitioners interested in international relations environment studies and human geography

Elephant Treaties Rachelle Adam, 2014-01-07 Based on a legal history of international biodiversity treaties from the late nineteenth century to the present Rachelle Adam argues that today's biodiversity crisis is rooted in European colonial history especially in the conservation treaties that the colonial powers and their non-governmental counterparts negotiated to protect Africa's big game animals Reflecting on the colonial past particularly on efforts to manage the commerce in elephant ivory Adam sheds light on why more recent attempts to arrest the decline in biodiversity by way of international agreement have failed This volume will spur a rethinking of such agreements and trigger a search for alternatives outside of existing international structures
