The Green House Alanna Stang, Christopher Hawthorne, 2005-06-02 From the arid deserts of Tucson Arizona to the icy forests of Poori Finland to the tropical beaches of New South Wales Australia to the urban jungle of downtown Manhattan critics Alanna Stang and Christopher Hawthorne have travelled to the farthest reaches of the globe to find all that is new in the design of sustainable or green homes The result is more than thirty five residences in fifteen countries and nearly every conceivable natural environment designed by a combination of star architects and heretofore unknown practitioners including Santiago Calatrava Shigeru Ban Miller Hull Rick Joy Lake Flato Kengo Kuma Glenn Murcutt Pugh Scarpa Werner Sobek and many others Projects are presented with large colour images plans drawings and an accompanying text that describes their green features and explains how they work with and in the environment The Green House is not only a beautiful object in its own right but is sure to be an indispensable reference for anyone building or interested in sustainable design

The Greening of Architecture Phillip James Tabb, A. Senem Deviren, 2017-03-02 Contemporary architecture and the culture it reflects dependent as it is on fossil fuels has contributed to the cause and necessity of a burgeoning green process that emerged over the past half century This text is the first to offer a comprehensive critical history and analysis of the greening of architecture through accumulative reduction of negative environmental effects caused by buildings urban designs and settlements Describing the progressive development of green architecture from 1960 to 2010 it illustrates how it is ever evolving and ameliorated through alterations in form technology materials and use and it examines different places worldwide that represent a diversity of cultural and climatic contexts The book is divided into seven chapters with an overview of the environmental issues and the nature of green architecture in response to them followed by an historic perspective of the pioneering evolution of green technology and architectural integration over the past five decades and finally providing the intransigent and culturally pervasive current examples within a wide range of geographic territories The greening of architecture is seen as an evolutionary process that is informed by significant world events climate change environmental theories movements in architecture technological innovations and seminal works in architecture and planning

throughout each decade over the past fifty years This time period is bounded on one end by the awareness of environmental problems beginning in the 1960 s the influential texts by Rachel Carson E F Schumacher Buckminster Fuller and Steward Brand and the impact of the OPEC Oil Embargo of 1973 and on the other end the pervasiveness of the necessary greening of architecture that includes systemic reforms in architectural and urban design land use planning transportation agriculture and energy production found in the 2000 s The greening process moves from remediation to holistic models of architecture Geographical landscapes give a global account of the greening process where some examples are parallel and sympathetic and others are in clear contrast to one another with very individuated approaches Certain events like the Rio Summit in 1992 and Kyoto Protocol in 1997 and themes such as the Hannover Principles in 2000 provide a dynamic ideological critique as well as a formal and technical discussion of the embodied and accumulative content of greening principles in architecture

Urban Green Neil B. Chambers,2011-07-05 Sustainable design is booming but the men and women dedicated to reducing their carbon impact have lost sight of what they are trying to save the natural world Author Neil Chambers has been at the forefront of cutting edge sustainable architecture for years and Urban Green is his revolutionary vision for bringing the power of the conservation and design movements together He advocates looking to nature for the missing components of the green revolution oysters that can clean water at up to 5 liters an hour beavers that reshape their environments while simultaneously enriching ecosystems and mountains that offer a new way of imagining how a city could be built By designing our homes and cities in harmony with the natural world we can take the next step in the sustainable revolution Green Building Michael Bauer,Peter Möslé,Michael Schwarz,2009-12-03 An important consideration for energy efficient buildings is their primary energy requirements over the entire life cycle How to determine this What integrative factors influence the performance of a healthy and sustainable building This while it may be important for clients and architects to know is frequently not very transparent This book has been written to assist with clarifying target criteria and expanding horizons when it comes to ecological buildings It is meant as a handbook and source of reference for clients architects planners and building operators to provide them with pertinent information about their design construction and operation how to do this in the most energy efficient and economical manner Also there is feedback and documentation about prominent buildings like the Hamburg Dockland or the Landesbank Baden Wuerttemberg in Stuttgart They provide excellent architectural examples for detailed construction and design solutions Further there are insightful interviews with architects and clients about many important buildings which help turn this book into an integrated source of reference for sustainable architecture A Guideline for Planning Construction and Operation of sustainable Buildings A source of reference for clients architects planners and building operators Innovative architectural examples with sustainable concepts and design **The Sourcebook of Contemporary Green Architecture** Sergi Costa Duran,2011-03-08 Lavishly illustrated with full color photographs drawings floor and aerial plans The Sourcebook of Contemporary Green Architecture features today s most

noteworthy environmentally friendly architectural projects Comprehensive chapters account for the core concerns of all architectural projects the needs of architects clients and partners as well as logistical area and cost management concerns and energy management while allowing readers a hands on understanding of what it takes to envision create and develop an environmentally conscious master plan building or landscape design Featured projects exhibit a range of sustainable design ideas from bioclimatic strategies to more complex off the grid constructions that include passive designs prefab systems water harvesting mechanisms and green renovations Projects include building eco certifications and eco design solutions to utilize advanced technologies and both cost management plans as well as plans geared toward more lax budgets are featured All projects included in The Sourcebook of Contemporary Green Architecture have been completed or are ongoing in the 21st century and were chosen as highly successful examples of green architects meeting the individual needs and tastes of their clients It is the perfect resource for architects city planners engineers and designers to find the knowledge and inspiration to carry us into a green architectural future
