Handbook For Clinical Memory Assessment Of Older Adults:

Handbook for Clinical Memory Assessment of Older Adults Leonard W. Poon, 1986-01-01 This Handbook provides directions to psychologists psychiatrists neurologists and other health care professionals for making informed decisions about clinical memory assessment The Handbook is intended to answer basic questions about memory diagnosis What underlying theoretical and clinical issues are important in the selection of an assessment instrument or battery What types of tests are available and how have these tests been validated with available theoretical and clinical evidence Although this Handbook concentrates on memory assessment of older adults many of the issues are also applicable to clinical memory assessment in general In the care and treatment of the elderly abnormal decline in both memory and intellectual functioning is a major diagnostic landmark of Alzheimer s disease and related disorders diseases that are commanding attention from health care professionals and public policymakers alike Although standardized memory test batteries are available there is no consensus among clinicians about the selection of tests to identify the loci of memory dysfunction and to evaluate treatment efficacy These instrument selection issues are also common in the diagnosis of other clinical syndromes in which memory and cognitive functioning are compromised PsycINFO Database Record c 2004 APA all rights reserved An Assessment Guide To Geriatric Neuropsychology Holly Tuokko, Thomas Hadjistavropoulos, 2014-04-04 At least half of all neuropsychological assessments are performed on elderly persons but the information clinicians need to make appropriate judgment calls is widely scattered Several books offering general descriptions of the cognitive functioning of the aged or of neuropsychological conditions affecting them are helpful to practitioners but do not provide reliable and valid normative information Two books that do provide this information do not focus on geriatric populations A concise yet comprehensive summary of what we now know about those over 65 with an extensive bibliography An Assessment Guide to Geriatric Neuropsychology fills the gap The neuropsychological assessment of elderly persons involves not only the performance based measurement of various capacities but heavy reliance on reports from caregivers both formal and informal about the day to day functioning of the affected person It also raises important yet often neglected ethical concerns The authors discuss all the measures that detect and discriminate among cognitive disorders of elderly persons including special measures relevant to caregiver reports and provide useful tables to assist in differential diagnosis They also reflect on the ethical issues that often confront the assessor of an elderly individual informed consent confidentiality the right of bodily autonomy and self determination and appropriate feedback This book will be an invaluable resource for all those called on to evaluate older clients

Handbook of the Psychology of Aging James E. Birren, 2013-10-22 Handbook of the Psychology of Aging Third Edition describes the psychology of adult development and aging This book is organized into four parts encompassing 28 chapters that cover the basic behavioral changes and capacities occurring with advancing age The first part deals with the history concept and models of the psychology of aging This part also examines the distinctions between physical biological

psychological and social time or age The second part explores the influences of racial ethnic and cultural factors on biological health social and psychological aging processes This part also surveys gender differences in aging The third part describes numerous behavioral processes changes and patterns in advancing age This part specifically considers the motivation cognitive and motor performance attentional processes learning memory personality and wisdom in aging The fourth part focuses on the applications of the concepts and principles of aging to the individual and society This book will be of great value to psychologists researchers and graduate students

Neuropsychological Evaluation of the Older Adult Joanne Green,2000-06-12 One of the largest patient populations seen by neuropsychologists are older adults suffering from problems associated with aging Further the proportion of the population aged 65 and above is rising rapidly This book provides a guide to neuropsychological clinicians increasingly called upon to assess this population The book details in a step by step fashion the phases and considerations in performing a neuropsychological assessment of an older patient It covers procedural details including review of patient s medical records clinical interview formal testing interpretation of test scores addressing referral questions and preparing an evaluation report Outlines a clear logical approach to neuropsychological evaluation Provides specific clinical practice guidelines for each phase of the evaluation Integrates clinical practice with up to date research findings Recommends specific tests for evaluating older adults Details how to interpret test findings and identify the patient s neuropsychological profile Illustrates important points with examples and case materials many neuropathologically confirmed Includes forms useful in clinical practice

Aging and Neuropsychological Assessment Asenath LaRue,2013-06-29 It is a privilege to be asked to write the foreword for so excellent a book so timely and so much needed by the field Not only is it most unusual these days to have a single authored volume on so broad a topic but Dr La Rue has done a superb job of providing both a scholarly treatise and a practical handbook With a burgeoning elderly population and the corresponding increase in geriatric psychopathology the needs of mental health services are exceeding by far the supply of appropriate providers In an effort to meet this need psychiatry medicine neurology pharmacology psychology nursing and social work have all made the provision of training in geriatrics and gerontology a high priority but I fear we are losing the race For example multidisciplinary teams that assess diagnose and treat mental health disorders in elderly patients are incomplete without clinical psychologists and neuropsychologists and yet there is barely a handful of clinical psychologists trained in dealing with geriatric patients We can count on our fingers the additional ones graduated each year In hospitals clinics and private practices across the country otherwise skilled psychologists are unprepared to respond to the special mental health needs of the elderly A few CME programs are helping to address this need but they are clearly not enough

Handbook of Clinical Interviewing With Adults Michel Hersen,Jay C. Thomas,2007-08-08 Clinical interviewing with adults is both an art and a science This handbook will appeal to a wide range of clinical researchers therapists interns and graduate students new to the complexities of the clinical interview and diagnostic process The comprehensive range of topics and

coverage that includes case illustrations with dialogue and differential diagnosis and co morbidity will be highly attractive features to researchers professional therapists and graduate students The Hersen and Thomas team is highly qualified to succeed in this ambitious set of three projects Carolyn Brodbeck Chapman University The Handbook of Clinical Interviewing with Adults is one of three interrelated handbooks on the topic of interviewing for specific populations It presents a combination of theory and practice plus concern with diagnostic entities for readers who work or one day will work with adults in clinical settings The volume begins with general issues structured versus unstructured interview strategies mental status examinations selection of treatment targets and referrals writing up the intake interview etc moves to a section on major disorders most relevant to adult clients depression bipolar disorder agoraphobia posttraumatic stress disorder eating disorders alcohol and drug abuse sexual dysfunction etc and concludes with a chapter on special populations and issues neurologically impaired patients older adults behavioral health consultation etc *Psychopharmacology Bulletin* ,1988

Clinician's Guide To Neuropsychological Assessment Rodney D. Vanderploeg, 2014-04-04 Neuropsychological assessment is a difficult and complicated process Often experienced clinicians as well as trainees and students gloss over fundamental problems or fail to consider potential sources of error Since formal test data on the surface appear unambiguous and objective they may fall into the habit of overemphasizing tests and their scores and underemphasizing all the factors that affect the validity reliability and interpretability of test data But interpretation is far from straightforward and a pragmatic application of assessment results requires attention to a multitude of issues This long awaited updated and greatly expanded second edition of the Clinician's Guide to Neuropsychological Assessment like the first focuses on the clinical practice of neuropsychology Orienting readers to the entire multitude of issues it guides them step by step through evaluation and helps them avoid common misconceptions mistakes and methodological pitfalls It is divided into three sections fundamental elements of the assessment process special issues settings and populations and new approaches and methodologies The authors all of whom are actively engaged in the clinical practice of neuropsychological assessment as well as in teaching and research do an outstanding job of integrating the academic and the practical The Clinician's Guide to Neuropsychological Assessment Second Edition will be welcomed as a text for graduate courses but also as an invaluable hands on handbook for interns postdoctoral fellows and experienced neuropsychologists alike No other book offers its combination of breadth across batteries and approaches depth and practicality Theoretical Perspectives on Cognitive Aging Timothy A. Salthouse, 2016-03-23 The phenomenon of age related cognitive decline has long been controversial both in terms of mere existence and with respect to how it is explained Some researchers have dismissed it as an artifact of declining health or lower levels of education and others have attributed it to general changes occurring in the external environment Still other interpretations have been based on the use it or lose it principle known as the Disuse Hypothesis or on the idea that there are qualitative differences in either the structure or the process of cognition across the adult years Perhaps the

most popular approach at present relies on the information processing perspective and attempts to identify the critical processing component most responsible for age related differences in cognition The primary purposes of this book are first to review the evidence of age related differences in cognitive functioning and then to evaluate the major explanations proposed to account for the negative relations between age and cognition that have been established Included is a discussion of theoretical dimensions and levels of scientific theorizing assumed to be helpful in understanding and evaluating alternative perspectives on cognitive aging The various perspectives are then covered in detail and analyzed The text concludes with observations about the progress that has been made in explaining cognitive aging phenomena plus recommendations for research practices that might contribute to greater progress in the future

Neuropsychological Assessment Muriel Deutsch Lezak, 2004 This revised text provides coverage of research and clinical practice in neuropsychology The 4th edition contains new material on tests assessment techniques neurobehavioral disorders and treatment effects

Successful Aging Paul Boris Baltes, Margret M. Baltes, 1993-05-28 More and more people live into old age This demographic revolution underscores the fact that old age is the last uncharted and unattended phase of the life cycle

A Compendium of Neuropsychological Tests Esther Strauss, Elisabeth M. S. Sherman, Otfried Spreen, 2006 This compendium gives an overview of the essential aspects of neuropsychological assessment practice It is also a source of critical reviews of major neuropsychological assessment tools for the use of the practicing clinician

Handbook of Psychological Assessment Gerald Goldstein, Michel Hersen, 2000-02-16 The field of psychological assessment has been undergoing rapid change The second edition of this Handbook published in 1990 appeared at the beginning of a decade marked by extensive advances in assessment in essentially all of its specialized areas There are many new tests new applications of established tests and new test systems Major revisions have appeared of established tests notably the Wechsler intelligence scales The time seemed right for a third edition since even over the relatively brief period of ten years many tests described in the second edition have been replaced and are no longer commonly used Furthermore much new research in such areas as neuropsychology cognitive science and psychopathology have made major impacts on how many tests and other assessment procedures are used and interpreted This third edition represents an effort to give the reader an overview of the many new developments in assessment while still maintaining material on basic psychometric concepts in order for it to continue to serve as a comprehensive handbook for the student and professional

Practitioner's Guide to Clinical Neuropsychology Robert M. Anderson Jr., 2012-12-06 The author has written an easily accessible summary of neuropsychological tests neuropsychiatric disorders and the relationships of test performance to disorder and treatment strategy This ready reference provides neuropsychologists with an understanding of the medical context within which neuropsychological evaluation and psychosocial therapy takes place

Handbook of Neuropsychology and Aging Paul David Nussbaum, 2013-11-11 Leaders in neuropsychology behavioral neurology speech and language science neuropsychiatry and many other disciplines

contribute to this volume the first comprehensive review of knowledge in the field They discuss a wide range of disorders including areas of recent research such as frontal lobe dementias and the neuropsychological aspects of late life depression and clinical problems typically given insufficient consideration in other works such as seizure disorder head injury and mental retardation Normal aging is also covered in detail and assessment procedures and clinical interventions are given thorough treatment Other highlights include discussions of guardianship and caregiving personality and behavior psychotic disorders Alzheimer s and head trauma

Middle Adulthood Sherry L. Willis, Mike Martin, 2005-06-23 This book is unique because of the focus on longitudinal studies and international perspectives There is no other book like it This book will be useful both as an advanced undergraduate or graduate course text and as a resource for scholars Rosemary Blieszner Virginia Polytechnic Institute and State University A very strong volume This book will clearly be a must have for scholars interested in midlife Michael Marsiske University of Florida Midlife is no longer an uncharted territory in human development A group of outstanding researchers from different countries focuses on this peak period in the life span Various views including historical cultural and socio structural perspectives are adopted Comprehensive reviews of studies on almost all relevant domains of human development are given and provide a colorful picture of what midlife in these days may be all about Sigrun Heide Filipp University of Trier Germany Middle adulthood is a critical period of the life course How we develop in middle age the central period of our lives can influence how well we cope in our later years Middle Adulthood A Lifespan Perspective explores these issues by bringing together a distinguished group of international contributors associated with a range of prestigious longitudinal studies Key Features Presents a much needed longitudinal lifespan perspective on middle age Provides a multicultural perspective to determine universal normative patterns of midlife development Addresses a broad scope of topics including historical perspectives on the emergence of middle age as a normative developmental period in the life course change and stability in personality and cognitive development and decline Middle Adulthood is designed for scholars researchers and practitioners in the field of adult development and aging It is an excellent text for advanced undergraduate and graduate students studying midlife development in the departments of Developmental Psychology Human Development and Family Studies Gerontology Family Diversity and Health

Psychological Treatment of Older Adults Michel Hersen, Vincent B. Van Hasselt, 2013-06-29 This multiauthored introductory textbook could

not have been conceived or brought to fruition 10 or 15 years ago. Indeed, at that time, relatively little attention was accorded to the psychological needs of older adults. The general tenor of the field then was that older adults would not benefit from psychological intervention. As we now know, this was a faulty assumption that has been discredited with empirical data. Indeed, clinical research data adduced primarily in the last decade clearly documents that older adults do benefit from specific psychotherapies that are tailored to their unique presentation of symptoms. Given the explosion of interest in this area, as evinced by increased investigatory activity, national funding, and media attention, and the increased number of masters and doctoral level courses devoted to this topic, we felt that the time was right for a textbook in the area. Such a flurry of activity also has been fueled by statistics showing how our population by the year 2030 will consist of 30% who are senior citizens. Moreover, since 12% of older adults in the community are estimated to have diagnosable psychiatric disorders, and 40% to 50% of older adult medical inpatients have a concomitant psychiatric disorder, the task for clinicians in the next century will be overwhelming.
